

The background of the cover is a vibrant blue sky with scattered white clouds. A bright, glowing light source, possibly the sun, is positioned on the left side, creating a strong lens flare effect that radiates across the sky. A dark-colored fighter jet is shown in profile, flying from left to right across the center of the image. The jet's wings are swept back, and it appears to be in a high-speed maneuver.

Almeraya Calderon,2017-10-20 This book presents selected contributions to the Symposium of Aeronautical and Aerospace Processes Materials and Industrial Applications of the XXV International Materials Research Congress IMRC Each chapter addresses scientific principles behind processing and production of materials for aerospace aeronautical applications The chapter deals with microstructural characterization including composites materials and metals The second chapter deals with corrosion in aerospace components is a large and expensive problema for aerospace industry Finally the last chapter covers modeling and simulation of different processes to evaluate and optimize the forming process This book is meant to be useful to academics and professionals

Simulation-driven Aerodynamic Design Using Variable-fidelity Models Leifur Leifsson,Slawomir Koziel,2015-01-09 Computer simulations is a fundamental tool of the design process in many engineering disciplines including aerospace engineering However although high fidelity numerical models are accurate they can be computationally expensive with evaluation time for a single design as long as hours days or even weeks Simulation driven design using conventional optimization techniques may be therefore prohibitive This book explores the alternative performing computationally efficient design using surrogate based optimization where the high fidelity model is replaced by its computationally cheap but still reasonably accurate representation a surrogate The emphasis is on physics based surrogates Application wise the focus is on aerodynamics and the methods and techniques described in the book are demonstrated using aerodynamic shape optimization cases Applications in other engineering fields are also demonstrated State of the art techniques and a depth of coverage never published before make this a unique and essential book for all researchers working in aerospace and other engineering areas and dealing with optimization computationally expensive design problems and simulation driven design
