Fundamentals of Renewable Energy Systems D. Mukherjee, S. Chakrabarti, 2004 This book can be used as a text book for the under graduate as well as post graduate curriculum of different universities and engineering institutions. Working personnel engaged in designing, installing and analyzing of different renewable energy systems can make good use of this book in course of their scheduled activities. It provides a clear and detailed exposition of basic principles of operation, their material science aspects and the design steps. Particular care has been taken in elaborating the concepts of hybrid energy systems, integrated energy systems and the critical role of renewable energy in preserving today's environment. References at the end of each chapter have been taken from publications in different reputed journals, recent proceedings of national and international conferences and recent web sites along with IREDA and TERI reports.

Handbook of Renewable Energy Technology Ahmed F. Zobaa, Ramesh C. Bansal, 2011 This book, consisting a series of papers written by experts in their respective fields of specialization, will provide a comprehensive coverage of renewable energy technologies such as wind, wave and solar thermal energy. Other industrial terms like photovoltaic systems, biomass, distributed generations and small hydro power systems are also discussed and further elaborated upon. The Handbook of Renewable Energy Technology will be of great practical benefit to professionals, scientists and researchers in the relevant industries and will be of interest to those of the general public wanting to know more about renewable energy technologies.
