

7 PRINCIPLES OF PRIVACY BY DESIGN

1

Proactive not reactive; preventative not remedial

Take a proactive rather than reactive approach to privacy. Identify and mitigate privacy risks before they happen.

2

Privacy as the default setting

Design privacy-by-default features to ensure that consumers don't have to take extra measures to protect privacy.

3

Privacy embedded into design

Take a privacy-first approach right from the initial stages of a product's development and design.

4

Full functionality – positive-sum, not zero-sum

Privacy is a positive-sum goal, not a zero-sum goal. Avoid the false idea of trade-offs between privacy and other functionalities.

5

End-to-end security – lifecycle protection

Prioritise the security of user data throughout its lifecycle, from data collecting to its deletion.

6

Visibility and transparency

Implement transparency by documenting and communicating actions clearly, through privacy and data-sharing policies.

7

Respect for user privacy

Keep the interests of your users at the core by building strong privacy safeguards and user-friendly systems.

Designing for Privacy and its Legal Framework Aurelia Tamò-Larrieux, 2018-11-03 This book discusses the implementation of privacy by design in Europe a principle that has been codified within the European Data Protection Regulation GDPR While privacy by design inspires hope for future privacy sensitive designs it also introduces the need for a common understanding of the legal and technical concepts of privacy and data protection By pursuing an interdisciplinary approach and comparing the problem definitions and objectives of both disciplines this book bridges the gap between the legal and technical fields in order to enhance the regulatory and academic discourse The research presented reveals the scope of legal principles and technical tools for privacy protection and shows that the concept of privacy by design goes beyond the principle of the GDPR The book presents an analysis of how current regulations delegate the implementation of technical privacy and data protection measures to developers and describes how policy design must evolve in order to implement privacy by design and default principles
