*From Aristotle to Darwin and Back Again* Etienne Gilson, 2009 Darwin's theory of evolution remains controversial even though most scientists philosophers and even theologians accept it in some form as an explanation for the variety of organisms The controversy erupts when the theory is used to try to explain everything including every aspect of human life and to deny the role of a Creator or a purpose to life The overreaching of many scientists into matters beyond the self imposed limits of scientific method is perhaps explained in part by the loss of two important ideas in modern thinking final causality or purpose and formal causality Scientists understandably bracket the idea out of their scientific thinking because they seek explanations on the level of material and efficient causes only Yet many of them wrongly conclude from their selective study of the world that final and formal causes do not exist at all and that they have no place in the rational study of life Likewise many erroneously assume that philosophy cannot draw upon scientific findings in light of final and formal causality to better understand the world and man The great philosopher and historian of philosophy Etienne Gilson sets out to show that final causality or purposiveness and formal causality are principles for those who think hard and carefully about the world including the world of biology Gilson insists that a completely rational understanding of organisms and biological systems requires the philosophical notion of teleology the idea that certain kinds of things exist and have ends or purposes the fulfillment of which are linked to their natures in other words formal and final causes His approach relies on philosophical reflection on the facts of science not upon theology or an appeal to religious authorities such as the Church or the Bible

*Mass Society and Its Culture, and Three Essays concerning Etienne Gilson on Bergson, Christian Philosophy, and Art* Étienne Gilson, Henri Gouhier, 2023-01-24 A medievalist and defender of the notion of Christian philosophy Etienne Gilson had a lifelong interest in the philosophy of art He questioned whether what is reproduced as art in contemporary society is art at all This is not a simple issue A cheap version of a novel is still a novel A picture of a statue is not a statue nor indeed is a photograph of a painting a painting Recorded music has particular complications The organizer of an industrial assembly line is neither an artist nor an artisan Yet thanks to such mass production a much broader population has knowledge of artworks than would otherwise be possible Religions must minister to mass societies and provide appropriate liturgies But in the process there is a danger of misrepresenting complex religious teachings At the end of his own life Henri Gouhier Gilson's first doctoral student prepared three essays on Gilson The first on Bergson gives a sense of Gilson's formation in early twentieth century French philosophy The second reconstructs the development of the notion of Christian philosophy and the heated controversy it provoked Finally Gouhier presents Gilson's general philosophy of art and gives a helpful framework to Gilson's comments on art in a mass society

[Taking Rites Seriously](#) Francis J. Beckwith, 2015-11-12 *Taking Rites Seriously* is about how religious beliefs and religious believers are assessed by judges and legal scholars and are

sometimes mischaracterized and misunderstood by those who are critical of the influence of religion in politics or in the formation of law. Covering three general topics: reason and motive, dignity and personhood, nature and sex, philosopher and legal theorist Francis J. Beckwith carefully addresses several contentious legal and cultural questions over which religious and non-religious citizens often disagree: the rationality of religious belief, religiously motivated legislation, human dignity in bioethics, abortion and embryonic stem cell research, reproductive rights and religious liberty, evolutionary theory and the nature of marriage. In the process, he responds to some well-known critics of public faith, including Brian Leiter, Steven Pinker, Suzanna Sherry, Ronald Dworkin, John Rawls, and Richard Dawkins, as well as to some religiously conservative critics of secularism such as the advocates for intelligent design.

**Beyond Evolution** Sy Garte, PhD, 2025-08-19. Is it possible that one of the biggest obstacles to harmonizing science and faith can finally be overcome? Respected biologist and former atheist Sy Garte says the answer is yes. A flash point for much of the science vs. faith divide has been Darwinian evolution. Sharing the same mistaken belief that science contradicts the Bible, many scientists and Christians have concluded that the worlds of science and religion are at odds. But according to biologist Sy Garte, PhD, evolution is irrelevant to the harmony of faith and science. And revolutionary new developments in biology are providing stronger evidence than ever before of a purposeful creator, God. In this book, Dr. Garte combines the latest research with a biblical worldview as he explains why biology is at the threshold of a major transition and why new theories beyond evolution are needed to make further progress. Why evolution by natural selection isn't as fundamental to biological science as many people think, and how divisions over evolution are bad for the church. Why misunderstandings about both the Bible and science have caused many people to unnecessarily abandon Christianity. How new evidence of purpose, agency, and decision making at the cellular level points to a creator, God. How the origin of life and human consciousness show that a reductionist, purely materialistic view of life is untenable and ignores new advances in science. In *Beyond Evolution*, Sy Garte challenges both scientists and people of faith to follow the evidence wherever it leads and argues powerfully for why that evidence warrants a belief in God.

*From Aristotle to Darwin and Back Again* Etienne Gilson, 2009-09-28. Foreword by Christoph Cardinal Schönborn. Darwin's theory of evolution remains controversial even though most scientists, philosophers, and even theologians accept it in some form as an explanation for the variety of organisms. The controversy erupts when the theory is used to try to explain everything, including every aspect of human life, and to deny the role of a Creator or a purpose to life. The overreaching of many scientists into matters beyond the self-imposed limits of scientific method is perhaps explained in part by the loss of two important ideas in modern thinking: final causality or purpose and formal causality. Scientists understandably bracket the idea out of their scientific thinking because they seek explanations on the level of material and efficient causes only. Yet many of them wrongly conclude from their selective study of the world that final and formal causes do not exist at all and that they have no place in the rational study of life. Likewise, many erroneously assume that philosophy cannot draw upon scientific findings in light of final and

formal causality to better understand the world and man The great philosopher and historian of philosophy Etienne Gilson sets out to show that final causality or purposiveness and formal causality are principles for those who think hard and carefully about the world including the world of biology Gilson insists that a completely rational understanding of organisms and biological systems requires the philosophical notion of teleology the idea that certain kinds of things exist and have ends or purposes the fulfillment of which are linked to their natures in other words formal and final causes His approach relies on philosophical reflection on the facts of science not upon theology or an appeal to religious authorities such as the Church or the Bible The object of the present essay is not to make of final causality a scientific notion which it is not but to show that it is a philosophical inevitability and consequently a constant of biophilosophy or philosophy of life It is not then a question of theology If there is teleology in nature the theologian has the right to rely on this fact in order to draw from it the consequences which in his eyes proceed from it concerning the existence of God But the existence of teleology in the universe is the object of a properly philosophical reflection which has no other goal than to confirm or invalidate the reality of it The present work will be concerned with nothing else reason interpreting sensible experience does it or does it not conclude to the existence of teleology in nature Etienne Gilson

seen as evolution's founding figure Charles Darwin is taken by many evolutionists to be the first to propose a truly modern theory of evolution Darwin's greatness however has obscured the man and his work at times even to the point of distortion Accessibly written this book presents a more nuanced picture and invites us to discover some neglected ambiguities and contradictions in Darwin's masterwork Delisle and Tierney show Darwin to be a man who struggled to reconcile the received wisdom of an unchanging natural world with his new ideas about evolution Arguing that Darwin was unable to break free entirely from his contemporaries more traditional outlook they show his theory to be a fascinating compromise between old and new Rediscovering this other Darwin and this other side of *On the Origin of Species* helps shed new light on the immensity of the task that lay before 19th century scholars as well as their ultimate achievements

*The Origin of Species* Charles Darwin, 2020-01-21 Charles Darwin's groundbreaking work of evolutionary biology The Origin of Species introduces the scientific theory of evolution which posits that species evolve over a period of many generations through a process of natural selection Darwin's theories have been widely embraced by the scientific community as fact and have laid the foundation for subsequent major advances in the field of biology It is arguably one of the most important scientific treatises ever written

**The Foundations of the Origin of Species** Charles Darwin, 2012-06-25 Charles Robert Darwin FRS 12 February 1809 19 April 1882 was an English naturalist

He established that all species of life have descended over time from common ancestors and proposed the scientific theory that this branching pattern of evolution resulted from a process that he called natural selection Darwin published his theory with compelling evidence for evolution in his 1859 book *On the Origin of Species* overcoming scientific rejection of earlier concepts of transmutation of species By the 1870s the scientific community and much of the general public had accepted evolution as a fact However many favoured competing explanations and it was not until the emergence of the modern evolutionary synthesis from the 1930s to the 1950s that a broad consensus developed in which natural selection was the basic mechanism of evolution In modified form Darwin's scientific discovery is the unifying theory of the life sciences explaining the diversity of life wikipedia *Did Darwin Write the Origin Backwards?* Elliott Sober, 2011-03-31 Is it accurate to label Darwin's theory the theory of evolution by natural selection given that the concept of common ancestry is at least as central to Darwin's theory Did Darwin reject the idea that group selection causes characteristics to evolve that are good for the group though bad for the individual How does Darwin's discussion of God in *The Origin of Species* square with the common view that he is the champion of methodological naturalism These are just some of the intriguing questions raised in this volume of interconnected philosophical essays on Darwin The author's approach is informed by modern issues in evolutionary biology but is sensitive to the ways in which Darwin's outlook differed from that of many biologists today The main topics that are the focus of the book common ancestry group selection sex ratio and naturalism have rarely been discussed in their connection with Darwin in such penetrating detail Author Professor Sober is the 2008 winner of the Prometheus Prize This biennial award established in 2006 through the American Philosophical Association is designed to honor a distinguished philosopher in recognition of his or her lifetime contribution to expanding the frontiers of research in philosophy and science This insightful collection of essays will be of interest to philosophers biologists and laypersons seeking a deeper understanding of one of the most influential scientific theories ever propounded *Charles Darwin* Gerhard Wichler, 2013-10-22 *Charles Darwin The Founder of the Theory of Evolution and Natural Selection* provides a comprehensive coverage of the whole spectrum of the theory of evolution The title presents the historical accounts and conceptual basis that leads to the foundation of the theory of evolution The text first covers the history of the theory of evolution the book also details the early form of the theory up to the point of the theories acceptance Next the selection discusses the basis and development of theory of evolution The book will be of great interest to anyone who wants to investigate in great depth the theory of evolution **On the Origin of Species** Charles Darwin, 2020-09-26 *The Origin* is one of the most important books ever published and a knowledge of it should be a part of the intellectual equipment of every educated person The book will endure in future ages so long as a knowledge of science persists among mankind Nature It took Charles Darwin more than twenty years to publish this book in part because he realized that it would ignite a firestorm of controversy *On the Origin of Species* first appeared in 1859 and it remains a continuing source of conflict to this day Even

among those who reject its ideas however the work's impact is undeniable In science philosophy and theology this is a book that changed the world In addition to its status as the focus of a dramatic turning point in scientific thought *On the Origin of Species* stands as a remarkably readable study Carefully reasoned and well documented in its arguments the work offers coherent views of natural selection adaptation the struggle for existence survival of the fittest and other concepts that form the foundation of modern evolutionary theory *The History of Evolutionary Thought* Jonathan P. Kellerson, 2017-05-19 Evolutionary thought the concept that species change over time has its roots in antiquity In 1858 Charles Darwin published a new evolutionary theory natural selection which was explained in detail in Darwin's *On the Origin of Species* Darwin proposed common descent and a branching tree of life meaning that two very different species could share a common ancestor Explore the history science of evolutionary thought from antiquity through the 21st century with this useful reference source *The Origin of Species* Charles Darwin, 2022-06-15 Charles Darwin's classic that exploded into public controversy revolutionized the course of science and continues to transform our views of the world Few other books have created such a lasting storm of controversy as *The Origin of Species* Darwin's theory that species derive from other species by a gradual evolutionary process and that the average level of each species is heightened by the survival of the fittest stirred up popular debate to fever pitch Its acceptance revolutionized the course of science
