Proceedings of Government/Industry Forum National Research Council, Division on Engineering and Physical Sciences, Board on Infrastructure and the Constructed Environment, Committee for Oversight and Assessment of U.S. Department of Energy Project Management, 2002-06-29

Recurrent problems with project performance in the U S Department of Energy DOE in the 1990s raised questions in Congress about the practices and processes used by the department to manage projects The 105th Committee of Conference on Energy and Water Resources directed DOE to investigate establishing a project review process Many of the findings and recommendations in this series of reports identified the need for improved planning in the early project stages front end planning to get the project off to the right start and the continuous monitoring of projects by senior management to make sure the project stays on course These reports also stressed the need for DOE to act as an owner not a contractor and to train its personnel to function not as traditional project managers but as knowledgeable owner s representatives in dealing with projects and contractors The NRC Committee for Oversight and Assessment of Department of Energy Project Management determined that it would be helpful for DOE to sponsor a forum in which representatives from DOE and from leading corporations with large successful construction programs would discuss how the owner s role is conducted in government and in industry In so doing the committee does not claim that all industrial firms are better at project management than the DOE Far from it the case studies represented at this forum were selected specifically because these firms were perceived by the committee to be exemplars of the very best practices in project management Nor is it implied that reaching this level is easy the industry speakers themselves show that excellence in project management is difficult to achieve and perhaps even more difficult to maintain Nevertheless they have been successful in doing so through

Implementing Project and Program Benefit Management Kenn Dolan, 2018-12-07 One of the most difficult yet important questions regarding projects is: What advantages will this project create for the investors and key stakeholders? Projects and programs should be treated as investments. This means that the focus of projects shifts from delivering within the triple constraints (time, cost, quality) towards some of the more fundamental questions: What is the purpose of this investment? What are the specific advantages expected? Are these benefits worth the investment? **Implementing Project and Program Benefit Management** is written for executives and practitioners within the portfolio, program, and project environment. It guides them through the important work that must be addressed as the investment progresses towards the realization of benefits. The processes discussed cover the strategic elements of benefits realization as well as the more detailed requirements which are the domain of the program delivery teams and the operational users. Using real cases to explain complex situations, operational teams and wider groups of stakeholders, including communities affected by infrastructure projects, will be able to engage in the conversation with the sponsors and delivery teams. Covering an area of program and project management that is rapidly becoming more widely valued, this book blends theory with practical
