TimeFlies Edward Amsden, 2013 Functional Reactive Programming FRP is a promising class of abstractions for interactive programs FRP systems provide values defined at all points in time behaviors or signals and values defined at countably many points in time events as abstractions Signal function FRP is a subclass of FRP which does not provide direct access to time varying values to the programmer but instead provides signal functions which are reactive transformers of signals and events as first class objects in the program All signal function implementations of FRP to date have utilized demand driven or pull based evaluation for both events and signals producing output from the FRP system whenever the consumer of the output is ready This greatly simplifies the implementation of signal function FRP systems but leads to inefficient and wasteful evaluation of the FRP system when this strategy is employed to evaluate events because the components of the signal function which process events must be computed whether or not there is an event occurrence In contrast an input driven or push based system evaluates the network whenever new input is available This frees the system from evaluating the network when nothing has changed and then only the components necessary to react to the input are re evaluated This form of evaluation has been applied to events in standard FRP systems but not in signal function FRP systems I describe the design and implementation of a signal function FRP system which applies pull based evaluation to signals and push based evaluation to events a push pull system The semantics of the system

are discussed and its performance and expressiveness for practical examples of interactive programs are compared to existing signal function FRP systems through the implementation of a networking application Abstract *Clojure Reactive Programming* Leonardo Borges,2015-03-23 If you are a Clojure developer who is interested in using Reactive Programming to build asynchronous and concurrent applications this book is for you Knowledge of Clojure and Leiningen is required Basic understanding of ClojureScript will be helpful for the web chapters although it is not strictly necessary Functional Reactive Programming for Real-time Reactive Systems Zhanyong Wan,2003 Functional and Logic Programming Masami Hagiya,Philip Wadler,2006-04-06 This book constitutes the refereed proceedings of the 8th International Symposium on Functional and Logic Programming FLOPS 2006 held in Fuji Susono Japan in April 2006 The 17 revised full papers presented together with 2 invited contributions were carefully reviewed and selected from 51 submissions The papers are organized in topical sections on data types FP extensions type theory LP extensions analysis contracts as well as Web and GUI

developers feel like they're hitting a wall. With this book, you will get to grips with reactive programming by steadily exploring various concepts. This hands-on guide gets you started with Reactive Programming (RP) in Python. You will learn about the principles and benefits of using RP, which can be leveraged to build powerful concurrent applications. As you progress through the chapters, you will be introduced to the paradigm of Functional and Reactive Programming (FaRP), observables and observers, and concurrency and parallelism. The book will then take you through the implementation of an audio transcoding server and introduce you to a library that helps in the writing of FaRP code. You will understand how to use third-party services and dynamically reconfigure an application. By the end of the book, you will also have learned how to deploy and scale your applications with Docker and Traefik and explore the significant potential behind the reactive streams concept and you'll have got to grips with a comprehensive set of best practices. What you will learn: Structure Python code for better readability, testing, and performance. Explore the world of event-based programming. Grasp the use of the most common operators in Rx. Understand reactive extensions beyond simple examples. Master the art of writing reusable components. Deploy an application on a cloud platform with Docker and Traefik. Who this book is for: If you are a Python developer who wants to learn Reactive programming to build powerful concurrent and asynchronous applications, this book is for you. Basic understanding of the Python language is all you need to understand the concepts covered in this book.
