Fundamentals of Infrared and Visible Detector Operation and Testing John David Vincent, Steve Hodges, John Vampola, Mark Stegall, Greg Pierce, 2015-10-26 Presents a comprehensive introduction to the selection operation and testing of infrared devices including a description of modern detector assemblies and their operation. This book discusses how to use and test infrared and visible detectors. The book provides a convenient reference for those entering the field of IR detector design, test or use those who work in the peripheral areas and those who teach and train others in the field. Chapter 1 contains introductory material. Radiometry is covered in Chapter 2. The author examines Thermal detectors in Chapter 3, the Classical photon detectors, simple photoconductors and photovoltaics in Chapter 4 and Modern Photon Detectors in Chapter 5. Chapters 6 through 8 consider respectively individual elements and small arrays of elements, the readouts ROICs used with large imaging arrays and Electronics for FPA Operation and Testing. The Test Set and The Testing Process are analyzed in Chapters 9 and 10 with emphasis on uncertainty and trouble shooting. Chapters 11 through 15 discuss related skills such as Uncertainty, Cryogenics, Vacuum Optics and the use of Fourier Transforms in the detector business. Some highlights of this new edition are that it Discusses radiometric nomenclature and calculations, detector mechanisms, the associated electronics, how these devices are tested and real life effects and problems. Examines new tools in Infrared detector operations, specifically selection and use of ROICs, electronics for FPA operation, operation of single element and very small FPAs, microbolometers and multi color FPAs. Contains five chapters with frequently sought after information on related subjects such as uncertainty, optics, cryogenics, vacuum and the use of Fourier mathematics for detector analyses. **Fundamentals of Infrared and Visible Detector Operation and Testing** Second Edition provides the background and vocabulary necessary to help readers understand the selection operation and testing of modern infrared devices.

Femtosecond Laser Assisted Lenticule Extraction Walter Sekundo, Felix Mathias Wagner, 2024-12-13 This is the first comprehensive textbook on Keratorefractive Lenticule Extraction (KLEx). In fact, this new textbook is an expansion and update of the successful book SMILE that was published in 2015. The new edition has now been expanded to include all available KLEx procedures such as SMILE, SMILE Pro, SmartSight, CLEAR and SILK. For the second time, the editors managed to gather a group of excellent international researchers and clinicians from all parts of the world as authors of the individual chapters. The publication follows the proven concept of the first edition, providing a clear step by step approach encompassing the fundamentals, healing response, energy management, biomechanics, complications management and surgical pattern for KLEx in general and each specific procedure in particular. For the first time, the reader will not only be able to understand KLEx in detail but also to appreciate differences in technologies available on the market.

Efficient material laser beam ablation with a picosecond laser Juan Pablo Calderón Urbina, 2020-07-22 Ultra short pulse laser processing of ultra hard materials requires an accurate and agile experimental and analytical investigation to determine an efficient choice of parameters and settings to optimize ablation Therefore this work presents a quality oriented experimental approach and an analytical approach for the modeling and validation of multi pulse picosecond laser beam ablation on cemented tungsten carbide This work starts with a review of literature and state of the art theories of four relevant areas for this research picosecond lasers laser beam ablation process cemented tungsten carbide WC and quality oriented tools Subsequently a concept for an efficient material laser beam ablation with a picosecond laser was introduced Furthermore two approaches for the investigation are presented from an experimental and analytical perspective respectively The first approach introduced a methodology for the identification of influential parameters It executes a quality oriented methodology based on the SWOT analysis cause and effect diagram and the variable search methodology The conclusion of the methodology gave the interaction of pulse repetition rate and scanner speed in the form of pulse overlap and track overlap PO TO as the most influential parameter in the maximization of the ablation rate The second most influential factors resulted laser beam power and burst mode The second approach description of the model executes a theoretical analysis of the picosecond laser beam ablation of cemented WC by the application of the Beer Lambert law and multi pulse ablation modeling The unavailable material properties were obtained by experimental investigations like in the cases of the incubation factor and the reflectivity factor Threshold fluence for cemented WC was determined by the application of the heat transfer theory and input power intensity was adapted to a Gaussian beam profile At the end of the approach power density visualizations of a picosecond laser pulse under the five available pulse repetition rates were modeled and validated The findings from the adaptation of the Beer Lambert law acted as basis for development of the multi pulse laser ablation model for both single pulse mode and burst mode respectively Based on the definition of the number of pulses N irradiating the same area the corresponding threshold fluence for N the input fluence and incubation factor ablation depth was modeled and experimentally validated Finally results and conclusions of both approaches were discussed and a framework for an efficient laser beam ablation was presented Recommendations for further actions on research and industry
