**Corporate Finance and Governance in Stakeholder Society** Shinichi Hirota, 2015-02-11

This book develops a new framework the stakeholder model that helps to understand corporate finance and governance in modern society where the sources of people's happiness have shifted from monetary to non monetary factors The book takes a more comprehensive approach than is typically found in the standard economics and finance literature by explicitly incorporating both the monetary and non monetary interests of stakeholders and by examining the value creation of corporations from a much broader perspective Specifically the book addresses contemporary issues concerning corporate finance and governance worldwide including

- How should we define corporate value in stakeholder society
- What is the role of modern corporations
- What are the principles underlying corporate financing decisions
- To what extent should shareholder rights be enhanced
- What determines the effectiveness of a company's board of directors
- What missions do firms set out and what is the role of mission statements
- How can we understand the diversity of financial and governance systems among different countries
- What legal and institutional reforms enhance or diminish

corporate value in stakeholder society The book will answer these questions theoretically and empirically Artificial Intelligence and its Impact on Business Wolfgang Amann, Agata Stachowicz-Stanusch, 2020-06-01 Artificial intelligence AI technologies are one of top investment priorities in these days They are aimed at finding applications in fields of special value for humans including education The fourth industrial revolution will replace not only human hands but also human brains the time of machines requires new forms of work and new ways of business education however we must be aware that if there is no control of human chatbot interaction there is a risk of losing sight of this interaction's goal First it is important to get people to truly understand AI systems to intentionally participate in their use as well as to build their trust because the measure of success for AI applications is the value they create for human lives Stanford University 2016 33 Consequently society needs to adapt to AI applications if it is to extend its benefits and mitigate the inevitable errors and failures This is why it is highly recommended to create new AI powered tools for education that are the result of cooperation between AI researchers and humanities and social sciences researchers who can identify cognitive processes and human behaviors This book is authored by a range of international experts with a diversity of backgrounds and perspectives hopefully bringing us closer to the responses for the questions what we should teach what the right set of future skills is how we should teach the way in which schools should teach and assess them and where we should teach what implications does AI have for today's education infrastructure We must remember as we have already noticed before education institutions would need to ensure that they have an appropriate infrastructure as well as the safety and credibility of AI based systems Ultimately the law and policies need to adjust to the rapid pace of AI development because the formal responsibility for appropriate learning outcomes will in future be divided between a teacher and a machine Above all we should ensure that AI respect human and civil rights Stachowicz Stanusch Amann 2018 The Management of Intellectual Property D. Bosworth, 2006-01-01 This book will be a useful resource for those studying or teaching the management of IP a welcome addition on the reading list for all good IP management courses Duncan Bucknell Journal of Intellectual Property Law and Practice This book brings together innovative contributions on the management of intellectual property IP and intellectual property rights by an esteemed and multi disciplinary group of economists management scientists accountants and lawyers Offering a broad and enlightening picture of the measurement and management of IP the contributors argue that the shift towards a knowledge based economy has increased the importance of IP and more generally intangible assets as a focus for company decision making behaviour The book explores these intangible assets which are driven by investments in R D marketing education and training management information systems and organizational structure The inherent risk in the development of such assets born from the involvement of creativity and innovation is also discussed The Management of Intellectual Property should prove of use to both students of management and managers in the field who have to make decisions with regard to investments in and the protection of IP and other intangible assets **The Portable MBA in Finance and Accounting**
