**Fundamentals of Engineering Economics and Decision Analysis** David Whitman, Ronald Terry, 2022-06-01 The authors cover two general topics basic engineering economics and risk analysis in this text Within the topic of

engineering economics are discussions on the time value of money and interest relationships. These interest relationships are used to define certain project criteria that are used by engineers and project managers to select the best economic choice among several alternatives. Projects examined will include both income and service producing investments. The effects of escalation, inflation, and taxes on the economic analysis of alternatives are discussed. Risk analysis incorporates the concepts of probability and statistics in the evaluation of alternatives. This allows management to determine the probability of success or failure of the project. Two types of sensitivity analyses are presented. The first is referred to as the range approach while the second uses probabilistic concepts to determine a measure of the risk involved. The authors have designed the text to assist individuals to prepare to successfully complete the economics portions of the Fundamentals of Engineering Exam. Table of Contents: Introduction, Interest and the Time Value of Money, Project Evaluation Methods, Service Producing Investments, Income Producing Investments, Determination of Project Cash Flow, Financial Leverage, Basic Statistics and Probability, Sensitivity Analysis. *Forthcoming Books*, Rose Arny, 2001. **Catalog of Copyright Entries. Third Series**, Library of Congress, Copyright Office, 1978. *Basics of Research Writing in Computational Fluid Dynamics*, Buddhi Prasad Sapkota, PhD, 2025-08-12. Computational Fluid Dynamics (CFD) is developing rapidly, becoming an essential interface between theoretical and applied fluid mechanics through numerical simulations. With the increasing availability and use of CFD tools, the importance of effective technical writing has become paramount, whether for well-structured papers, theses, or technical reports. This book, *Basics of Research Writing in Computational Fluid Dynamics*, aims to equip students, researchers, and professionals with the skills needed to communicate CFD work effectively. While not a comprehensive guide to CFD theory or numerical methods, though fundamental concepts are introduced where necessary, this book focuses specifically on the writing process for CFD research: developing conceptual understanding and procedural skills, crafting abstracts, methods, results, and discussion sections, and proper use of literature, algorithms, validation, data, and software. This book serves as a valuable resource for graduate students writing theses or dissertations involving CFD, early career researchers preparing journal articles or conference papers, industry professionals documenting simulation work in technical reports, non-native English speakers navigating CFD terminology in academic writing, and students and practitioners across mathematics, engineering, and physics. The book includes annotated examples from published CFD literature, clear definitions of key terms and concepts, step-by-step guides for scientific writing. I extend my sincere gratitude to the global CFD community, particularly reviewers and editors, open-source developers advancing the field, colleagues who shared drafts and reviews, and BooksClinic Publishing for their support. This book serves as a starting point for research communication. True mastery develops through practice, peer feedback, and engagement with scientific literature. While every effort has been made to ensure accuracy, I welcome suggestions for improvement in future editions.
