

Introduction

Hybrid Coating Technologies is a company based out of California that has created a new product called Green Polyurethane (PU). It is more environmentally friendly because it is a plant based product that uses renewable resources. This new Green Polyurethane completely eliminates isocyanates which have proven to be harmful to humans and other wildlife. Isocyanates are used in current polyurethane and are confirmed to be hazardous when burned. Green Polyurethane can be used indoors and outdoors on all different types of surfaces.

Hybrid Polyurethane Coating Systems Based On Renewable:

Renewable Resources for Surface Coatings, Inks and Adhesives Rainer Höfer, 2022-11-11 Providing a detailed survey of renewable raw materials for paints inks and glues this book is ideal for researchers and practitioners working in the areas of green chemistry industrial chemistry and sustainability Beginning with a brief history of coatings and adhesives this book walks the reader through the chemistry properties sourcing and processing of a number of renewable raw materials including lipids natural resins proteins and carbohydrates Their use in a range of recent developments and concepts from material protection to decorative paints and coatings adhesives and sealants is highlighted providing the reader with a complete and modern foundation to the field

Eco-Friendly Waterborne Polyurethanes Ram K. Gupta, Ajay Kumar Mishra, 2022-01-24 The polyurethane industry is among the fastest growing with polyurethanes used in consumer as well as industrial sectors Waterborne polyurethanes WPU exhibit many advantages over conventional volatile organic compounds VOCs based polyurethanes and have emerged as an environmentally friendly alternative WPU offer an opportunity to use sustainable raw materials to produce environmentally sustainable polymers particularly polyols derived from vegetable oils Eco Friendly Waterborne Polyurethanes Synthesis Properties and Applications provides state of the art knowledge of the synthesis application and property enhancement of WPU Covers various types of eco friendly materials and technologies used to synthesize WPU Presents an overview and applications of WPU in several advanced research areas Provides fundamentals of synthetic processes and their chemistries for specific applications Elaborates on advanced approaches used to convert renewable resources into polymers Offers new direction to scientists researchers and students to better understand the chemistry technologies and applications Written for polymer chemists materials scientists and other researchers and industry this book serves as a comprehensive reference for readers interested in the development and application of sustainable polymers

Green Nanotechnology Oleg Figovsky, Dmitry Beilin, 2017-09-01 Green nanotechnology has two goals producing nanomaterials and products without harming the environment or human health and producing nanoproducts that provide solutions to environmental problems It uses existing principles of green chemistry and green engineering to make nanomaterials and nanoproducts without toxic ingredients at low temperatures using less energy and renewable inputs wherever possible and using lifecycle thinking in all design and engineering stages The production and process aspects of green nanotechnology involve both making nanomaterials in a more environmentally benign fashion and using nanomaterials to make current chemical processes more environmentally acceptable This book contains information about advanced nanomaterials that can be produced without harming the environment or human health This encompasses the production of nanomaterials without environmental toxicity at room temperature and with the use of renewable energy sources The book contains the descriptions and results of theoretical and experimental researches in the field of environment friendly nanotechnology carried out over the past decade by the scientific team of company Polymate Ltd International

Lubguban, Gerard G. Dumancas, Roberto M. Malaluan, Arnold C. Alguno, 2025-04-21 As global priorities shift towards sustainable resources there is a growing interest in alternatives to petroleum based raw materials for industrial polyurethane PU foam production Polyurethane foams PUFs produced from the reaction between a polyol a polymer with multiple hydroxyl groups and a diisocyanate are widely used for their versatility They range from flexible foams like those found in mattresses or furniture to rigid foams used for home insulation The market for PU foams is anticipated to grow due to rising demand for comfort Historically petroleum based polyols have been favored for their availability and versatility However as petroleum supplies dwindle with oil reserves projected to be exhausted by around 2052 the pressing need for sustainable alternatives is clear to sustain the PU industry Bio based substitutes such as polyols derived from palm soybean castor and sunflower oils have been extensively researched to replace the petroleum based polyol feedstock This book focuses on applying coconut oil derived polyols in polyurethane foam production offering a detailed examination of their potential benefits and associated difficulties The introductory chapter outlines the critical need for greener alternatives and emphasizes the significant role of coconut oil as a substitute for petroleum based polyols Subsequent chapters delve into the chemistry and synthesis of coconut oil derived polyols and polyurethanes providing insights into their properties and contributions to polyurethane formulations This book further provides an overview of how coconut oil s high saturation impacts the polyol production process and explores methods to overcome these challenges It bridges the gap between raw material science and practical applications using coconut oil in polymer studies It provides valuable information for researchers and industry professionals aiming to innovate with sustainable polymer materials *Encyclopedia of Polymer Applications, 3 Volume Set* Munmaya Mishra, 2018-12-17 Undoubtedly the applications of polymers are rapidly evolving Technology is continually changing and quickly advancing as polymers are needed to solve a variety of day to day challenges leading to improvements in quality of life The Encyclopedia of Polymer Applications presents state of the art research and development on the applications of polymers This groundbreaking work provides important overviews to help stimulate further advancements in all areas of polymers This comprehensive multi volume reference includes articles contributed from a diverse and global team of renowned researchers It offers a broad based perspective on a multitude of topics in a variety of applications as well as detailed research information figures tables illustrations and references The encyclopedia provides introductions classifications properties selection types technologies shelf life recycling testing and applications for each of the entries where applicable It features critical content for both novices and experts including engineers scientists polymer scientists materials scientists biomedical engineers macromolecular chemists researchers and students as well as interested readers in academia industry and research institutions Special Materials, Composites and Green Concrete Alan Kin Tak
