Molecular Interventions for Developing Climate-Smart Crops: A Forage Perspective Rajesh Kumar Singhal, Shahid Ahmed, Saurabh Pandey, Subhash Chand, 2023-06-16 This edited book is a collection of information on molecular interventions needed for climate resilient forage crops. The main focus is to address the gap in the advanced scientific knowledge for the forage species. Agriculture is extremely vulnerable to climate and even slight change in climatic factors such as temperature causes tremendous losses in yield potential. Forage crops are crucial in global food security and environmental sustainability and face several environmental challenges in field conditions. However, the research on forage crops is far off compared to agricultural crops and causes a substantial gap in forage demand and productivity. Further, this gap is directly associated with animal health, reproduction, and productivity. Abiotic stresses mainly affect the plant's crucial processes, ultimately reducing the final yield. The problem of abiotic stresses is more frequent in forage crops as they are growing and cultivated in less productive soil and harsh conditions. This book discusses current aspects of crucial physiological, biochemical, and molecular processes in forage crops which are essential for forage crops improvement. The text's major focus is on the advanced technologies and approaches such as seed priming, biofortification, breeding, omics, transgenic, and bioengineering of metabolic pathways in unique ways which helps us develop innovative solutions for forage crops. This book covers all the crucial advanced technologies which help mitigate the abiotic stresses in forage crops. We believe that this book will initiate and introduce the readers to state-of-the-art developments and is unique in this field of study. This book is of interest to teachers, researchers, climate change scientists, capacity builders, and policymakers. Also, the book serves as additional reading material for undergraduate and graduate students of agriculture, forestry, ecology, soil science, and environmental sciences. National and international agricultural scientists and policymakers will also find this a worthwhile read. *Indian Journal of Veterinary Pathology*, 2008-12
