de force Malcolm Feeley University of California Berkeley *Demography and Degeneration* Richard A. Soloway, 2014-02-01 Richard Soloway offers a compelling and authoritative study of the relationship of the eugenics movement to the dramatic decline in the birthrate and family size in twentieth century Britain Working in a tradition of hereditarian determinism which held fast to the premise that like tends to beget like eugenicists developed and promoted a theory of biosocial engineering through selective reproduction Soloway shows that the appeal of eugenics to the middle and upper classes of British society was closely linked to recurring concerns about the relentless drop in fertility and the rapid spread of birth control practices from the 1870s to World War II Demography and Degeneration considers how differing scientific and pseudoscientific theories of biological inheritance became popularized and enmeshed in the prolonged often contentious national debate about race suicide and the dwindling family Demographic statistics demonstrated that birthrates were declining among the better educated most successful classes while they remained high for the poorest least educated portion of the population For many people steeped in the ideas of social Darwinism eugenicist theories made this decline all the more alarming they feared that falling birthrates among the better classes signified a racial decline and degeneration that might prevent Britain from successfully negotiating the myriad competitive challenges facing the nation in the twentieth century Although the organized eugenics movement remained small and elitist throughout most of its history this study demonstrates how pervasive eugenic assumptions were in the middle and upper reaches of British society at least until World War II It also traces the important role of eugenics in the emergence of the modern family planning movement and the formulation of population policies in the interwar years **The Effects of Social Health Insurance Reform on People's Out-of-Pocket Health Expenditure in China** Kai Liu, 2016-09-21 This study examines and explains the relationship between social health insurance SHI participation and out of pocket expenditures OOP as well as the mediating role the institutional arrangement of SHI plays in this relationship in China Embracing a new institutionalist approach it develops two analytical perspectives determination which identifies the mechanisms of social health insurance and strategic interaction which explores the interaction among social health insurance agencies healthcare providers patients and institutions It reveals the poor performance of social health insurance in decreasing out of pocket health expenditures caused by a trade off between the reimbursement behavior management and purchasing mechanisms of social health insurance programs Further it finds that the inequitable allocation of healthcare resources and patients concerns regarding the benefits offset the strategies used by social health insurance agencies to manage care seeking behavior It also discovers that the complex interactions between insurance agencies doctors patients and a larger disabling institutional surrounding restricts the purchasing efficiency of social health insurance This book is characterized by its unique synthesis of the role of the institutional arrangement of social health insurance in China the interaction between the stakeholders in health sectors and of the relationship between healthcare institutions actors and policy outcomes Providing a comprehensive overview it enables scholars and graduate

students to understand the ongoing process of social health insurance reform as well as the dynamics of health cost inflation in China It also benefits policymakers by recommending a single payer model based on an evidence based investigation
