Handbook of Industrial Polyethylene and Technology Mark A. Spalding, Ananda Chatterjee, 2017-10-26 This handbook provides an exhaustive description of polyethylene. The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene. The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days. New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene, high density polyethylene, copolymers and polyethylene produced from metallocene catalysts. With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties. Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers, processing aids, anti-fogging agents, pigments and flame retardants. Common processing methods including extrusion, blown film, cast film, injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding, fiber processing, pipe extrusion, reactive extrusion, wire and cable and foaming processes. The business of polyethylene including markets, world capacity and future prospects are detailed. This handbook provides the most current and complete technology assessments and business practices for polyethylene resins.

The process examined is similar to Univation UNIPOL process. This report examines one-time costs associated with the construction of a United States based plant and the continuing costs associated with the daily operation of such a plant. More specifically it discusses Capital Investment broken down by Total fixed capital required divided in production unit, ISBL infrastructure, OSBL and contingency. Alternative perspective on the total fixed capital divided in direct costs, indirect costs and contingency. Working capital and costs incurred during industrial plant commissioning and start-up. Production cost broken down by Manufacturing variable costs, raw materials, utilities, Manufacturing fixed costs, maintenance costs, operating charges, plant overhead, local taxes and insurance. Depreciation and corporate overhead costs. Raw materials consumption, products generation and labor requirements. Process block flow diagram and description of industrial site installations.
