Ashour, 2019-08-08 Neutrosophic Set in Medical Image Analysis gives an understanding of the concepts of NS along with knowledge on how to gather interpret analyze and handle medical images using NS methods It presents the latest cutting edge research that gives insight into neutrosophic set s novel techniques strategies and challenges showing how it can be used in biomedical diagnoses systems The neutrosophic set NS which is a

generalization of fuzzy set offers the prospect of overcoming the restrictions of fuzzy based approaches to medical image analysis Introduces the mathematical model and concepts of neutrosophic theory and methods Highlights the different techniques of neutrosophic theory focusing on applying the neutrosophic set in image analysis to support computer aided diagnosis CAD systems including approaches from soft computing and machine learning Shows how NS techniques can be applied to medical image denoising segmentation and classification Provides challenges and future directions in neutrosophic set based medical image analysis

Practical Applications of the Independent Neutrosophic Components and of the Neutrosophic Offset Components Florentin Smarandache, 2021-12-20 The newly introduced theories proposed as extensions of the fuzzy theory such as the Neutrosophic Pythagorean Spherical Picture Cubic theories and their numerous hybrid forms are criticized by the authors of 1 In this paper we respond to their critics with respect to the neutrosophic theories and show that the DST that they want to replace the A IFS with has many flaws Their misunderstanding with respect to the partial and total independence of the neutrosophic components is that in the framework of the neutrosophic theories we deal with a MultiVariate Truth Value truth upon many independent random variables as in our real life world not with a UniVariate Truth Value truth upon only one random variable as they believe About the membership degrees outside of the interval 0 1 which are now in the arXiv and HAL mainstream it is normal that somebody who over works works overtime to have an over membership i e membership degree above 1 to be distinguished from those who do not work overtime whose membership degree is between 0 and 1 And similarly a negative employee that who does only damages to the company to have a negative membership i e membership degree below 0 in order to distinguish him from the positive employees those whose membership degree is above 0 There are elementary practical applications in this paper that allow us to think out of box in this case the box is the interval 0 1
