

5.6: Concentration of product

- Dilute products such as tincture can be made by maceration or percolation, depending on the previous factors.
- For semi-concentrated preparations (concentrated infusions, for e.g.) the more efficient percolation process is used) unless the drug cannot be powdered or is not worth powdering, when double or triple maceration is chosen.
- Concentrated preparations, of which liquid extracts or dry extracts are example, are made exclusively by percolation, with the exception that continuous extraction can be used if the solvent is suitable and the constituents are thermo-stable.

5.7: Recovery of solvent from the marc

- The residue of the drug after extraction (often known as the marc) is saturated with solvent and if economic the latter is recovered.
