The Original Basement Waterproofing Handbook Jack Masters, 1995 **Dry Basement Science Hard Cover** Lawrence Janesky, 2005 *5 Steps to a Dry Basement Or Crawl Space* Ron Gay, 2005

It's raining and water starts seeping into your home's basement. What can a homeowner do? Fortunately, a new comprehensive book from Welkin House can help fix that wet basement problem without expensive waterproofing methods. The author, Ronald Gay, is a veteran in the field of residential construction and consulting for more than 20 years, specializing in wet basement consulting for more than 10 years. In this ground-breaking guide for homeowners and professionals, new lessons are taught that make all the difference in solving this stressful home maintenance nightmare.

Basement Waterproofing, 1994. This work examines the factors to consider when deciding on the type of basement construction, including the waterproofing. It provides guidance on the form and characteristics of the main categories of waterproofing: bonded sheet membranes, cavity drain membranes, bentonite clay, active membranes, liquid applied membranes, mastic asphalt, cementitious proprietary multi-coat renders, toppings, and coatings, and cementitious crystallization active systems.

The Complete Modern Guide to Basement Waterproofing J. Scott Gallawa, 2002 *Basement Waterproofing*, 1994. Intended for those responsible for supervising the installation of specific waterproofing systems, this book covers the principles of design and installation and gives a list of straightforward dos and don'ts when applying the main waterproofing systems described in *Basement Waterproofing Design Guide*. It includes similar information on geocomposite drainage systems.

Dry Basement Healthy Home, **Waterproofing Basement** Norbert Quest, 2011-12-11. Information on the typical costs of waterproofing a basement yourself and the steps it takes to complete this task. There are many ways to waterproof a basement. Waterproofing methods generally fall into three main categories or systems. Your first option is the barrier system. Barrier systems work by preventing moisture condensation or water from invading your basement walls and flooring. A barrier system can be placed on the exterior of your home, the foundation of the house, where water can seep into the basement, or on the interior of the basement walls, flooring, and wall joint. Your second option is a diversion system. A diversion system, as the name implies, collects and diverts water away from the affected area. Sump pumps are a prime example of an effective diversion system for basements. Water accumulates in a cavity known as the sump pit, and a high-powered pump collects and diverts the water away from the basement. This is an excellent choice if your basement experiences heavy flooding during the rainy season. Your third option is a drainage system. Drainage systems are often used in conjunction with diversion systems. Drainage tiles and solid membranes are examples of drainage systems. A drainage system has two main functions: to separate the rest of the basement from the seeping water or moisture and to collect and transport the water to the basement drain.
