Specify the source of the definition of the objects.

File name: C:\Users\Fred\Documents\artists.csvBrowse...

Specify how and where you want to store the data in the current database.

☐ Import the source data into a new table in the current database.

If the specified table does not exist, Access will create it. If the specified table already exists, Access might overwrite its contents with the imported data. Changes made to the source data will not be reflected in the database.

☒ Append a copy of the records to the table: Artists

If the specified table exists, Access will add the records to the table. If the table does not exist, Access will create it. Changes made to the source data will not be reflected in the database.

☐ Link to the data source by creating a linked table.

Access will create a table that will maintain a link to the source data. You cannot change or delete data that is linked to a text file. However, you can add new records.

How To Import Shape Into Microsoft Access:

A Step by Step Guide to Using Census 2000 Data Anthony E. Fairfax, 2004 *MS Access And SQL Server Crash Course: A Step by Step, Project-Based Introduction to Java GUI Programming* Vivian Siahaan, Rismon Hasiholan Sianipar, 2019-11-13

This is a Java GUI crash course. This book will help you quickly write efficient high quality access database driven code with Java. It's an ideal way to begin whether you're new to programming or a professional developer versed in other languages. The lessons in this book are a highly organized and well indexed set of tutorials meant for students and programmers. Netbeans a specific IDE Integrated Development Environment is used to create GUI Graphical User Interface applications. The finished product is the reward but the readers are fully engaged and enriched by the process. This kind of learning is often the focus of training. In this book you will learn how to build from scratch two access database management systems using Java. In designing a GUI and as an IDE you will make use of the NetBeans tool. In chapter one you will create School database and six tables. In chapter two you will study Creating the initial three table projects in the school database Teacher table TClass table and Subject table. Creating database configuration files. Creating a Java GUI for viewing and navigating the contents of each table. Creating a Java GUI for inserting and editing tables and Creating a Java GUI to join and query the three tables. In chapter three you will learn Creating the main form to connect all forms. Creating a project will add three more tables to the school database the Student table the Parent table and Tuition table. Creating a Java GUI to view and navigate the contents of each table. Creating a Java GUI for editing inserting and deleting records in each table. Creating a Java GUI to join and query the three tables and all six. In chapter four you will study how to query the six tables. In chapter five you will create and configure database. In chapter six you will study some image processing techniques using Java. In chapter seven you will create Suspect table in crime database. This table has eleven columns suspect_id primary key suspect_name birth_date case_date report_date suspect_status arrest_date mother_name address telephone and photo. You will also create GUI to display edit insert and delete for this table. In chapter eight you will create a table with the name Feature_Extraction which has eight columns feature_id primary key suspect_id foreign key feature1 feature2 feature3 feature4 feature5 and feature6. The six fields except keys will have VARCHAR(255) data type. You will also create GUI to display edit insert and delete for this table. In chapter nine you will create two tables Police and Investigator. The Police table has six columns police_id primary key province city address telephone and photo. The Investigator table has eight columns investigator_id primary key investigator_name rank birth_date gender address telephone and photo. You will also create GUI to display edit insert and delete for both tables. In the last chapter you will create two tables Victim and Case_File. The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo. The Case_File table has seven columns case_file_id primary key suspect_id foreign key police_id foreign key investigator_id foreign key victim_id foreign key status and description. You will create GUI to display edit insert and delete for both tables as
