Reliable Icon In Physiology Sanoop KS,Mridul GS,Nishanth PS,2012-08-31 **Plant and Human Health, Volume 1** Munir Ozturk,Khalid Rehman Hakeem,2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1 4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from

natural products is not without its problems. Frequent challenges encountered include the procurement of raw materials, the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures. Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics. The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor. Volume 1 highlights how humans from specific areas or cultures use indigenous plants. Despite technological developments, herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West. The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship. Volume 2 deals with the phytochemical and molecular characterization of herbal medicine. Specifically, it focuses on the secondary metabolic compounds which afford protection against diseases. Lastly, Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health. Together, this three volume collection intends to bridge the gap for herbalists, traditional and modern medical practitioners and students and researchers in botany and horticulture.

Jain,2003-08-06 Biometric authentication refers to identifying an individual based on his or her distinguishing physiological and or behavioral characteristics It associates an individual with a previously determined identity based on that individual s appearance or behavior Because many physiological or behavioral characteristics biometric indicators are distinctive to each person biometric identifiers are inherently more reliable and more capable than knowledge based e g password and token based e g a key techniques in differentiating between an authorized person and a fraudulent impostor For this reason more and more organizations are looking to automated identity authentication systems to improve customer satisfaction security and operating efficiency as well as to save critical resources Biometric authentication is a challenging pattern recognition problem it involves more than just template matching The intrinsic nature of biometric data must be carefully studied analyzed and its properties taken into account in developing suitable representation and matching algorithms The intrinsic variability of data with time and environmental conditions the social acceptability and invasiveness of acquisition devices and the facility with which the data can be counterfeited must be considered in the choice of a biometric indicator for a given application In order to deploy a biometric authentication system one must consider its reliability accuracy applicability and efficiency Eventually it may be necessary to combine several biometric indicators multimodal biometrics to cope with the drawbacks of the individual biometric indicators **Indian National Bibliography** B.
