

Chapter 1

1.1 - Introduction to Cell Biology

What is cell theory?	- Cells are the fundamental building blocks of all living organisms - Cells are the basic units of life - Cells are derived from other cells (by cell division)
Explain the three types of cell division.	1. Mitosis - two identical daughter cells, occurs in ALL body cells. Allows for growth and asexual reproduction in unicellular organisms. 2. Meiosis - four unique daughter cells with $\frac{1}{2}$ DNA and results in sex cells. Allows for sexual reproduction in most multicellular organisms. 3. Binary fission - allows for reproduction in prokaryotes/bacteria cells
What are the eight functions of life?	GHRIMMEN G: Growth H: Homeostasis R: Reproduction I: Irritability/response M: Movement M: Metabolism E: Excretion N: Nutrition
Apply the eight functions of life to paramecium	Growth - increases in size, cytoplasm, # of organelles until cell division Homeostasis - contains contractile vacuoles which regulate water; maintains internal environment through diffusion across the plasma membrane Reproduction - asexual, binary fission Irritability/response - cilia wave and propel cell in reaction to the environment Movement - cilia propels cell around, cytoplasm flows through cell Metabolism - aerobic cellular respiration in
