Geopolymers as Sustainable Surface Concrete Repair Materials Ghasan Fahim Huseien, Abdul Rahman Mohd Sam, Mahmood Md. Tahir, 2022-08-11 The progressive deterioration of concrete surface structures is a major concern in construction engineering that requires precise repairing While a number of repair materials have been developed geopolymer mortars have been identified as potentially superior and environmentally friendly high performance construction materials as they are synthesized by selectively combining waste materials containing alumina and silica compounds which are further activated by a strong alkaline solution Geopolymers as Sustainable Surface Concrete Repair Materials offers readers insights into the synthesis properties benefits and applications of geopolymer based materials for concrete repair Discusses manufacturing and design methods of geopolymer based materials Assesses mechanical strength and durability of geopolymer based materials under different aggressive environmental conditions Characterizes the microstructure of these materials using XRD SEM EDX TGA DTG and FTIR measurements Describes application of geopolymer based materials as surface repair materials Compares environmental and cost benefits against those of traditional OPC and commercial repair materials This book is written for researchers and professional engineers working with concrete materials including civil and materials engineers **Civil Engineering**, 2007 **Strain Hardening Cementitious Composites** Minoru

Kunieda, Toshiyuki Kanakubo, Tetsushi Kanda, Koichi Kobayashi, 2023-01-31 This volume gathers the latest advances innovations and applications in the field of cementitious composites It covers advanced fiber reinforced concrete materials such as strain hardening cement based composites SHCC textile reinforced concrete TRC and high performance fiber reinforced cement based composites HPFRCC All these new materials exhibit pseudo ductile behavior resulting from the formation of multiple fine cracks when subject to tensile loading The use of such types of fiber reinforced concrete could revolutionize the planning development dimensioning structural and architectural design construction of new and strengthening and repair of existing buildings and structures in many areas of application The contents reflect the outcomes of the activities of SHCC5 International RILEM Workshop on Strain Hardening Cementitious Composites in 2022

Concrete Permeability and Durability Performance Roberto J. Torrent, Rui D. Neves, Kei-ichi Imamoto, 2021-12-22 Durability and service life design of concrete constructions have considerable socio economic and environmental consequences in which the permeability of concrete to aggressive intruders plays a vital role Concrete Permeability and Durability Performance provides deep insight into the permeability of concrete moving from theory to practice and presents over 20 real cases such as Tokyo's Museum of Western Art Port of Miami Tunnel and Hong Kong Zhuhai Macao sea link including field tests in the Antarctic and Atacama Desert It stresses the importance of site testing for a realistic durability assessment and details the Torrent Method for non destructive measurement of air permeability It also delivers answers for some vexing questions Should the coefficient of permeability be expressed in m^2 or m/s How to get a mean pore radius of concrete from gas permeability tests Why should permeability preferably be measured on site How can service life of

reinforced concrete structures be predicted by site testing of gas permeability and cover thickness Practitioners will find stimulating examples on how to predict the coming service life of new structures and the remaining life of existing structures based on site testing of air permeability and cover thickness Researchers will value theoretical principles testing methods as well as how test results reflect the influence of concrete mix composition and processing **Advanced Concrete Design**
