Problem 2A**AVERAGE VELOCITY AND DISPLACEMENT****PROBLEM**

The fastest fish, the sailfish, can swim 1.2×10^2 km/h. Suppose you have a friend who lives on an island 16 km away from the shore. If you send a message using a sailfish as a messenger, how long will it take for the message to reach your friend?

SOLUTION

Given: $v_{\text{avg}} = 1.2 \times 10^2$ km/h
 $\Delta x = 16$ km

Unknown: $\Delta t = ?$

Use the definition of average speed to find Δt .

$$v_{\text{avg}} = \frac{\Delta x}{\Delta t}$$

Rearrange the equation to calculate Δt .

$$\Delta t = \frac{\Delta x}{v_{\text{avg}}}$$

$$\Delta t = \frac{16 \text{ km}}{\left(1.2 \times 10^2 \frac{\text{km}}{\text{h}}\right) \left(\frac{1 \text{ h}}{60 \text{ min}}\right)} = \frac{16 \text{ km}}{2.0 \text{ km/min}} = 8.0 \text{ min}$$

ADDITIONAL PRACTICE

- The Sears Tower in Chicago is 443 m tall. Joe wants to set the world's stair climbing record and runs all the way to the roof of the tower. If Joe's average upward speed is 0.60 m/s, how long will it take Joe to climb from street level to the roof of the Sears Tower?
- An ostrich can run at speeds of up to 72 km/h. How long will it take an ostrich to run 1.5 km at this top speed?
- A cheetah is known to be the fastest mammal on Earth, at least for short runs. Cheetahs have been observed running a distance of 5.50×10^2 m with an average speed of 1.00×10^2 km/h.
 - How long would it take a cheetah to cover this distance at this speed?
 - Suppose the average speed of the cheetah were just 85.0 km/h. What distance would the cheetah cover during the same time interval calculated in (a)?

The impact of quantum mechanics on our day to day life is growing at an exponential rate of which most people are unaware For example the toaster is a prime example of a quantum mechanical device While quantum mechanics arose as a subject in physics quantum mechanical thinking has had and continues to have a broad impact on mathematics For example operator theory as we know it today would not exist without von Neumann s effort to put quantum mechanics on a solid mathematical foundation This book is defined for undergraduate students of mathematics to obtain an introduction to quantum mechanical ideas and the associated mathematics without requiring an extensive background in physics This book is focused around the following topics

- 1 The Mathematical Structure of Quantum Mechanics We develop the main mathematical structure of quantum theory in the setting of the accepted postulates of quantum mechanics Dirac s bra ket notation for the required linear algebra aspects will be utilized as well as the mathematical and physical implications arising from the mathematical aspects of self adjoint linear operators with emphasis on the finite dimensional setting
- 2 Dynamics of a Quantum Particle We introduce the Schrodinger equation and discuss its physical meaning and mathematical structure The required partial differential equations theory is elementary and will be developed from scratch
- 3 Measurement Time Evolution Uncertainty and the Harmonic Oscillator This builds on the previously developed mathematics and culminates with a detailed discussion of the quantum mechanical workhorse example the harmonic oscillator
- 4 Quantum Mechanics of Angular Momentum Most of the book is developed in the context of the relatively simple one dimensional quantum systems This topic goes into three dimensions and illustrates how very interesting mathematics can yield novel physical explanations that are unobtainable with classical methods
- 5 The Postulates of Quantum Mechanics Measurement Composite Systems Tensor Products and Entanglement This is the area that most students have heard of quantum entanglement action at a distance and Bell s inequality The mathematics will be at an elementary level except possibly for tensor products which are sadly neglected many linear algebra courses today but which are literally exploding in a variety of current applications
