Real Analysis with Economic Applications Efe A. Ok, 2011-09-05 There are many mathematics textbooks on real analysis but they focus on topics not readily helpful for studying economic theory or they are inaccessible to most graduate students of economics Real Analysis with Economic Applications aims to fill this gap by providing an ideal textbook and reference on real analysis tailored specifically to the concerns of such students The emphasis throughout is on topics directly relevant to economic theory In addition to addressing the usual topics of real analysis this book discusses the elements of order theory convex analysis optimization correspondences linear and nonlinear functional analysis fixed point theory dynamic programming and calculus of variations Efe Ok complements the mathematical development with applications that provide concise introductions to various topics from economic theory including individual decision theory and games welfare economics information theory general equilibrium and finance and intertemporal economics Moreover apart from direct applications to economic theory his book includes numerous fixed point theorems and applications to functional equations and optimization theory The book is rigorous but accessible to those who are relatively new to the ways of real analysis The formal exposition is accompanied by discussions that describe the basic ideas in relatively heuristic terms

and by more than 1 000 exercises of varying difficulty This book will be an indispensable resource in courses on mathematics for economists and as a reference for graduate students working on economic theory

Optimization of Temporal Networks under Uncertainty Wolfram Wiesemann, 2012-01-05 Many decision problems in Operations Research are defined on temporal networks that is workflows of time consuming tasks whose processing order is constrained by precedence relations For example temporal networks are used to model projects computer applications digital circuits and production processes Optimization problems arise in temporal networks when a decision maker wishes to determine a temporal arrangement of the tasks and or a resource assignment that optimizes some network characteristic e g the time required to complete all tasks The parameters of these optimization problems e g the task durations are typically unknown at the time the decision problem arises This monograph investigates solution techniques for optimization problems in temporal networks that explicitly account for this parameter uncertainty We study several formulations each of which requires different information about the uncertain problem parameters
