Observations on the Life-cycle of Plasmodium Malariae M. J. Mackerras, Q. N. Ercole, 1948 **A Novel Study on Mathematical Models of Plasmodium Life Cycle in Human Hepatocyte and Mosquito Midgut** N. Nagadevi Bala, 2023-02-11 A Novel Study on Mathematical Models of Plasmodium Life Cycle in Human Hepatocyte and Mosquito Midgut by N Nagadevi Bala is a comprehensive study that presents mathematical models for the life cycle of Plasmodium the parasite that causes malaria in both human hepatocytes and mosquito midguts The book delves into the intricacies of the life cycle of Plasmodium from its transmission through a mosquito bite to its replication within human hepatocytes and the subsequent release of the parasite into the bloodstream where it causes malaria Using mathematical models and simulations the author analyzes the different stages of the life cycle and identifies key factors that affect the transmission and pathogenesis of the disease The book also explores various strategies to combat malaria including the use of drugs and vaccines Overall A Novel Study on Mathematical Models of Plasmodium Life Cycle in Human Hepatocyte and Mosquito

Midgut is a valuable resource for researchers and students in the fields of microbiology parasitology and mathematical modeling The book provides a thorough understanding of the complex life cycle of Plasmodium and the potential for using mathematical models to improve our understanding of the disease and develop more effective treatments The Life Cycle of Plasmodium (Plasmodium) Youngi Eyles, Fong, Dunn, Guinn, Warren, and Sandosham, 1964 (Protozoa: Plasmodiidae), a Parasite of Gibbons Richard Graham Andre,NORTH CAROLINA STATE UNIV RALEIGH.,1974 The specific objectives of this study were to determine the exoerythrocytic cycle of P youngi to ascertain the erythrocytic cycle of this parasite to transmit experimentally the gibbon malaria from infected animals to non infected animals using colonized Anopheles Meigen mosquitoes and to study the sporogonic cycle of the malarial organism in certain anophelines **Nucleosome Dynamics**

During the Erythrocytic Life Cycle of Plasmodium Falciparum Victoria Marie Rothe,2020 Identification of Plasmodium Falciparum Protein Kinase Substrates and Interacting Proteins Jessica C. Yap,2012 Malaria is a devastating disease that results in almost one million deaths annually Most of the victims are children under the age of five in Sub Saharan Africa Malaria parasite strains throughout developing countries are continually building resistance to available drugs Current therapies such as mefloquine chloroquine as well as artemisinin are becoming less effective and this underscores the urgency for therapeutics directed against novel drug targets In order to identify new drug targets the molecular biology of the malaria parasite Plasmodium needs to be elucidated Plasmodium exhibits a unique cell cycle in which it undergoes multiple rounds of DNA synthesis and mitosis without cytokinesis Thus cell cycle regulatory proteins are likely to be promising pathogen specific drug targets It is expected that fluctuating activity of key proteins such as protein kinases play an essential role in regulating the noncanonical life cycle of Plasmodium Consequently malarial kinases are a prime target for therapy One way to better understand the role of malarial kinases in Plasmodium cell cycle regulation is to identify putative protein kinase substrates and interacting proteins Two malarial kinases that have been implicated in regulating malaria parasite cell cycle stages were investigated in this study P falciparum CDK like Protein Kinase 5 PfPK5 and cAMP Dependent Protein Kinase A PfPKA A transgenic P falciparum line was created for the expression of epitope tagged PfPK5 for pull down analysis Phospho substrate antibodies were used to identify physiological substrates of both PfPK5 and PfPKA Immunoblotting with these antibodies identified several potential substrates Identities of the PfPKA physiological substrates were determined from the global P falciparum phosphoproteome dataset that has recently been generated in our laboratory Characterization of PfPKA and PfPK5 substrates as well as the proteins they interact with will help us to develop innovative therapies targeting binding sites
