G. Speight, 1941 *Industrial Coal Gasification Technologies Covering Baseline and High-Ash Coal* Martin Gräbner, 2014-08-18 The ongoing discussion about reaching the peak oil point maximal delivery rate with conventional methods emphasizes a fundamental change of the frame conditions of oil based basic products The alternative with the largest potential is the use of coal Coal gasification is the production of coal gas a mixture of mainly

hydrogen and carbon monoxide from coal adding agents like steam water and oxygen which can be used in a number of industrial processes e g hydroformulation and Fischer Tropsch process Many different kinds of coal do naturally occur and due to shrinking natural resources there has been a substantial gain of interest in poor ash rich coal Beside the quality of coal there is a number of other parameters influencing the efficiency of coal gasification such as temperature pressure and reactor type Although several books dealing with the subject of gasification have recently been published few are strictly focussed on coal as feedstock This monograph provides the reader with the necessary chemical background on coal gasification Several types of coal baseline coal and ash rich coal are compared systematically pointing out the technological efforts achieved so far to overcome this challenge Using a new innovative order scheme to evaluate the gasification process at a glance the ternary diagram the complex network of chemistry engineering and economic needs can be overviewed in a highly efficient way This book is a must have for Chemical and Process Engineers Engineering Students as well as Scientists in the Chemical Industry

Springer Handbook of Metrology and Testing Horst Czichos, Tetsuya Saito, Leslie E. Smith, 2011-07-22 This Springer Handbook of Metrology and Testing presents the principles of Metrology the science of measurement and the methods and techniques of Testing determining the characteristics of a given product as they apply to chemical and microstructural analysis and to the measurement and testing of materials properties and performance including modelling and simulation The principal motivation for this Handbook stems from the increasing demands of technology for measurement results that can be used globally Measurements within a local laboratory or manufacturing facility must be able to be reproduced accurately anywhere in the world The book integrates knowledge from basic sciences and engineering disciplines compiled by experts from internationally known metrology and testing institutions and academe as well as from industry and conformity assessment and accreditation bodies The Commission of the European Union has expressed this as there is no science without measurements no quality without testing and no global markets without standards
