Rakov,2016-04-07 This new book provides a focused set of topics suitable for advanced undergraduate or graduate courses on lightning It presents the current state of the art in lightning science including areas such as lightning modeling calculation of lightning electromagnetic fields electromagnetic methods of lightning location and lightning damaging effects and protective techniques Pedagogical features designed to facilitate class learning include end of chapter summaries further reading suggestions questions and problems and a glossary explaining key lightning and atmospheric electricity terms A selection of appendices are provided at the end of the book which include detailed derivations of exact equations for computing electric and magnetic fields produced by lightning Designed for a single semester course on lightning and its effects and written in a style accessible to technical non experts this book will also be a useful up to date reference for scientists engineers and practitioners who have to deal with lightning in their work **Lightning** Vladimir A. Rakov,Martin A. Uman,2007-01-08 *Lightning Physics and Effects* is the first book that covers essentially all aspects of lightning including lightning physics lightning protection and the interaction of lightning with a variety of objects and systems as well as with the environment It is written in a style that will be accessible to the technical non expert and is addressed to anyone interested in lightning and its effects This will include physicists engineers working in the power communications computer and aviation industries meteorologists atmospheric chemists foresters ecologists physicians working in the area of electrical trauma and architects This comprehensive reference volume contains over 300 illustrations 70 tables containing quantitative information and a bibliography of more than 6000 references *Subject Guide to Books in Print* ,2001 **Environmental and Space Electromagnetics** Hiroshi Kikuchi,2012-12-06 This book is based on the updated versions of a lively mixture of tutorials topical papers and scientific and technological contributions collected from the International URSI Symposium on Environmental and Space Electromagnetics held in Tokyo on 4 6 September 1989 It was sponsored by the International Union of Radio Science URSI as an activity of Commission E Chairman present editor preceding the URSI General Assembly in Prague Czechoslovakia in 1990 The aim was an exchange of information and views to highlight the state of the art in radio science and interdisciplinary areas Along this line the editor has attempted to cover quite new novel or unconventional subjects besides more traditional or conventional ones Although a great many subjects have apparently been covered this book has been edited so the reader can find some common concepts or views presented

On this basis a group of many subjects can be treated in a unified fashion and new ideas and views can be gained as a most valuable addition to current knowledge This is one of the major features of this volume that cannot be found in any of the monographs or proceedings that cover a narrow range of limited topics Its broad scope does not stand for presentation in a superficial and shallow manner but stands for a strong focus on the search for a common nature in basic concepts or views in apparently diverse subjects and a focus on the advanced or innovative nature of each contribution Meteorological

Earth occurs in the tropical region mainly in the central portion of the African Continent in the Amazon region in South America and in Indonesia Despite this fact no book about tropical lightning is currently available There is also no book about the relation between global warming and tropical lightning Although this relationship is not very well understood at the present time it has been considered by the Intergovernmental Panel on Climate Change IPCC community as extremely important in the study of global warming The reason for this is that lightning can contribute through feedback mechanisms to global warming The purpose of the present book is to review the current knowledge about lightning in the tropical region trying to compare observations made at different times and places and with different techniques and indicate how this knowledge can be used to investigate and predict future impacts of global warming on Earth Recurrent Magnetic Storms

Bruce T. Tsurutani,2006-01-10 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 167 This book reviews our current understanding of magnetic storms and geomagnetic activity that occur during the declining and the minimum phases of the solar sunspot cycle From discussion of solar and interplanetary phenomena that affect the magnetosphere ionosphere and atmosphere with special focus on how underlying processes interact readers will gain advanced perspectives on continuing research and new research needs Recurrent Magnetic Storms Corotating Solar Wind Streams sets the stage for evolving future explanations of fundamental response of the interplanetary and global systems to the sun Scientists researchers and students who work in Magnetospheric Physics Aeronomy Solar and Interplanetary Physics and who have specific interest in Space Weather phenomena will find this book an important resource
