Heat lost by steel = Heat gained by water [energy balance equation]

$$m_b C_{pb} (100 - T_f) = m_w \times C_{pw} (T_f - 30)$$

Final equilibrium temp. $T_f = \boxed{}^{\circ}\text{C}$

An Introduction to

Mass and Heat Transfer Stanley Middleman,1997-10-30 This text is the outgrowth of Stanley Middleman s years of teaching and contains more than sufficient materials to support a one semester course in fluid dynamics His primary belief in the classroom and hence the material in this textbook is that the development of a mathematical is central to the analysis and design of an engineering system or process His text is therefore oriented toward teaching students how to develop mathematical representations of physical phenomena Great effort has been put forth to provide many examples of experimental data against which the results of modeling exercises can be compared and to expose students to the wide range of technologies of interest to chemical environmental and bio engineering students Examples presented are motivated by real engineering applications and may of the problems are derived from the author s years of experience as a consultant to companies whose businesses cover a broad spectrum of engineering technologies *Fundamentals of Heat and Mass Transfer* Frank P. Incropera,David P. DeWitt,2002 This book provides a complete introduction to the physical origins of heat and mass transfer Contains hundred of problems and examples dealing with real engineering processes and systems New open ended problems add to the increased emphasis on design Plus Incropera DeWitts systematic approach to the first law develops readers confidence in using this essential tool for thermal analysis **Lettre présentée au roi par le sieur Du Buisson, au nom et par l'avis de ceux de la religion réformée, touchant le voyage du roi.
