Chapman,2015-06-17 Excerpt from The Marine Power Plant Year 1922 The purpose of this book is to bring before the student the thermodynamics of the marine power plant the types of machinery used for ship propulsion and to give him a comprehensive idea of the layout and function of the various pieces of auxiliary machinery The book makes no pretenses at being an exhaustive treatise It is intended as a first book in marine engineering At Lehigh University the study of the marine power plant as presented in this book is preceded by a course in thermodynamics and followed by a summer at sea and by a more thorough and detailed study of marine engines turbines and Diesel engines The thermodynamic and economic features of the power plant have been accentuated throughout the book Very little attention has been given to mechanical details and all pure descriptive matter has been reduced to a minimum Details can be better learned under actual operating conditions on shipboard than from the inadequate treatment in a text book A short chapter on thermodynamics has been added as a review for the engineering student and also as a foundation study for others who may study the book Complete calculations for the sizes of the boilers and auxiliaries of a typical plant are given in Chap XIX It is believed that this is the first time such calculations have appeared in print A special feature of the book is the comparison of the various types of machinery used today for ship propulsion which is concluded with a table showing an unbiased comparison of seven types of propelling machinery While the book is intended primarily for the students of naval architecture marine engineering and ship operation it is believed that it will bring before the sea going engineer and ship owner a better understanding of the many types of propelling machinery and auxiliaries used today About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work
