Marine Faunal Diversity In India Taxonomy Ecology And Conservation:

Marine Faunal Diversity in India Krishnamoorthy Venkataraman, Chandrakasan Sivaperuman, 2014-11-21 More than 70% of the earth's surface is covered by water making it an ideal and abundant resource for studying species diversity faunal communities and ecosystems India's massive coastline 5 044 miles means it plays a major role in housing these faunal communities Of the 32 animal phyla 15 are represented in India's marine ecosystem covering more than 15 000 species Marine and coastal ecosystems of India provide supporting services in the form of wide range of habitats Major ecosystems such as estuaries mangroves coral reefs lagoons seaweeds and sea grasses serve as nurseries for both inshore and offshore fishes and others many of which are supposed to be commercially exploited *Marine Faunal Diversity in India* describes different marine faunal group ranges from sponges corals mollusks crabs fishes reptiles birds marine mammals mangrove fauna and tsunami impact on marine faunal diversity The chapters written by reputed experts in their respective fields illustrate diversity and distribution of marine faunal communities Key aspects of the ecology and conservation of this important ecosystem are also discussed *Marine Faunal Diversity in India* provides marine biologists and related researchers with access to the latest research and field studies from this major region Provides the latest field research on marine faunal diversity throughout the vast and species rich Indian region Brings together expertise from top marine biology researchers in the country Covers a diverse array of aquatic environments including coastal and island areas Discusses conservation ecology of marine faunal groups **Biodiversity and Climate Change Adaptation in Tropical Islands** Chandrakasan Sivaperuman, A. Velmurugan, Awnindra Kumar Singh, I. Jaisankar, 2018-04-05 *Biodiversity and Climate Change Adaptation in Tropical Islands* provides comprehensive information on climate change biodiversity possible impacts adaptation measures and policy challenges to help users rehabilitate and preserve the natural resources of tropical islands While biodiversity and climate change of tropical islands has previously received less attention it is ironically one of the most vulnerable regions in this regard The core content of the work derives largely from the ideas and research output from various reputed scientists and experts who have recorded climate change impacts on aquatic and coastal life in tropical regions Contributors have direct working experience with the tribes in some of the tropical islands All of their expertise and information is compiled and presented in the work including coverage related to climate change This work highlights the ever growing need to develop and apply strategies that optimize the use of natural resources both on land and in water and judicious use of biodiversity It functions as a critical resource on tropical island biodiversity for researchers academicians practitioners and policy makers in a variety of related disciplines Covers a huge range of biodiversity documentation conservation measures and strategies that can be applied to various sectors from forests to agriculture Brings together expertise from researchers in the area who have direct experience in the regions described Contains a wealth of field research related to biodiversity conservation and its applications from a variety of tropical islands **Marine Ecology** Muhammet Turkoglu, Umur Önal, Ali

İsmen,2018-08-01 During the last decades aquatic resources have been severely depleted due to human induced factors such as overexploitation and pollution and more recently due to deviations in the physicochemical parameters of oceans dramatic changes in weather patterns and melting of glaciers The effects of these man made factors are occurring in a relatively shorter time scale and in many cases are beyond the capacity of organisms to adapt to these deviations The majority of natural aquatic resources which are one of the most important food sources on the planet are being used to the extent that limits their capacity for regeneration Despite ongoing attempts towards developing strategies for long term management of aquatic resources all over the world efforts have met with limited success Thus the sustainable use of aquatic resources has become a very important reality considering a projected human population of 11 billion by the year 2100 With this reality in mind the purpose of this book is to shed more light on the field of marine ecology by emphasizing the diversity of aquatic life on earth and its importance both as part of a balanced ecosystem and as part of critical source of food on earth The book covers important findings discussions and reviews on a variety of subjects on environmental and competitive interactions of marine organisms at different trophic levels and their effects on the productivity dynamics and structure of marine ecosystems around the world Each chapter focuses on a specific case in the field of marine ecology and was written by researchers with years of experience in their respective fields We hope that academicians researchers and students as well as experts and professionals working in the field of marine ecology will benefit from these contributions We also hope that this book will inspire more studies to help better understand the marine environment and develop strategies to better protect this crucial element of life on earth *Ecology, Conservation, and Restoration of Chilika Lagoon, India* C. Max

Finlayson,Gurdeep Rastogi,Deepak R. Mishra,Ajit K. Pattnaik,2020-01-31 This book chronicles the decades long work of studying analyzing and reversing the environmental pressures that threatened India s Chilika Lagoon the largest brackish water lagoon in the region and the second largest in the world Designated as one of India s first Ramsar Sites in 1981 Chilika Lagoon continued to degrade for a decade longer Then the Chilika Development Authority CDA was established to gather information and devise a restoration plan that benefits the ecosystems of the lagoon with sensitivity to the needs and livelihoods of local communities Expert contributors detail the work of analysis planning and implementation including extensive coverage of such topics as Devising a plan for implementing Ramsar wise use guidelines Sedimentologic chemical and isotopic impacts Hydrodynamics and salinity Runoff and sediment in watersheds of the Lagoon s Western Catchment Long term analysis of water quality and continued water quality monitoring Bio optical models for cyclone impact assessment Studies of geomorphology land use and sedimentary environments Spatiotemporal assessment of phytoplankton communities Creation of a post restoration scenario for fish and fisheries Assessing status of waterbirds species diversity and migration patterns The result was a major hydrological intervention to re establish hydrological and salinity regimes biodiversity and fish catches and help protect the livelihood of lagoon dependent communities The story of the rehabilitation and management

of Chilika Lagoon demonstrates that it is possible to halt and reverse the encroachment and degradation of wetlands to restore biodiversity and to provide benefits for large numbers of people Ecology Conservation and Restoration of Chilika Lagoon goes beyond scientific research articles to explore institutional and governance issues political ecology and the Ramsar Convention s guidelines for ecosystem restoration The book will benefit researchers wetland managers government policy makers and more general readers concerned with restoration and conservation of wetlands around the planet

Ghosh,2020-08-24 This book presents a comprehensive overview of DNA barcoding and molecular phylogeny along with a number of case studies It discusses a number of areas where DNA barcoding can be applied such as clinical microbiology especially in relation to

infection management DNA database management and plant animal interactions and also presents valuable information on the DNA barcoding and molecular phylogeny of microbes algae elasmobranchs fishes birds and ruminant mammals Furthermore it features unique case studies describing DNA barcoding of reptiles dwelling in Saudi Arabian deserts genetic variation studies in both wild and hatchery populations of *Anabas testudineus* DNA barcoding and molecular phylogeny of Ichthyoplankton and juvenile fishes of Kuantan River in Malaysia and barcoding and molecular phylogenetic analysis of indigenous bacteria from fishes dwelling in a tropical tidal river Moreover since prompt identification and management of invasive species is vital to prevent economic and ecological loss the book includes a chapter on DNA barcoding of invasive species Given its scope this book will appeal not only to researchers teachers and students around the globe but also to general readers

DNA Barcoding in Marine Perspectives Subrata Trivedi, Abid Ali Ansari, Sankar K. Ghosh, Hasibur Rehman, 2016-08-31 More than two third of the surface area of our planet is covered by oceans and assessment of the marine biodiversity is a challenging task With the increasing global population there is a tendency to exploit marine resources for food energy and other requirements This puts pressure on the fragile marine environment and needs sustainable conservation efforts Marine species identification using traditional taxonomical methods are often burdened with taxonomic controversies Here in this book we will discuss the comparatively new concept of DNA barcoding and its significance in marine perspective This molecular technique can be helpful in the assessment of cryptic species which are widespread in marine environment and can also be used to link the different life cycle stages to the adult which is difficult to accomplish in marine ecosystems Other advantages of DNA barcoding include authentication and safety assessment of seafood wildlife forensics conservation genetics and detection of invasive alien species IAS Global DNA barcoding efforts in the marine habitat include MarBOL CeDAMar CMarZ SHARK BOL etc DNA barcoding of different marine groups ranging from the microbes to mammals is to be revealed In conjugation with newer and faster techniques like high throughput sequencing DNA barcoding is serving as an effective modern tool in marine biodiversity assessment and conservation

Coastal Wetlands: Alteration and Remediation Charles W. Finkl, Christopher Makowski, 2017-07-18 This book delves into human induced and natural impacts on coastal wetlands intended or otherwise through a series of vignettes that elucidate the environmental insults and efforts at amelioration and remediation The alteration and subsequent restoration of wetland habitats remain key issues among coastal scientists These topics are introduced through case studies and pilot programs that are designed to better understand the best practices of trying to save what is left of these fragile ecosystems Local approaches as well as national and international efforts to restore the functionality of marsh systems are summarily approached and evaluated by their efficacy in producing resilient reclamations in terms of climate smart habitat conservation The outlook of this work is global in extent and local by intent Included here in summarized form are professional opinions of experts in the field that investigate the crux of the matter which proves to be human pressure on coastal wetland

environments Even though conservation and preservation of these delicate environmental systems may be coming at a later date many multi pronged approaches show promise through advances in education litigation and engineering to achieve sustainable coastal systems The examples in this book are not only of interest to those working exclusively with coastal wetlands but also to those working to protect the surrounding coastal areas of all types **Climate Change, Ocean**

Acidification and Sponges José Luis Carballo, James J. Bell, 2017-10-27 While sponges represent a very simple group of organisms which are represented by over 8000 species there is considerable interest in the increasing role they may play in future marine ecosystems While we still have a comparatively limited understanding of how sponges will respond to ocean warming and acidification there is evidence that some species may have the ability to acclimate or even adapt to these stressors This comprehensive collection of articles describes our current understanding of the impacts of ocean acidification and warming on sponges across multiple levels of biological organisation and from the geological past to the present With expert contributions from across the world this book represents the most up to date view on sponge responses to climate change This book will be of interest to a wide audience of marine scientists and managers who are grappling with how to manage conserve and protect marine ecosystems Faunal Ecology and Conservation of the Great Nicobar Biosphere Reserve
