Agents And Ambient Intelligence Achievements And Challenges In The Intersection Of Agent Technology And Ambient Intelligence Ambient Intelligence And Smart Environments:

Agents and Ambient Intelligence Tibor Bosse, 2012 The concept of an intelligent agent a computational system capable of performing certain tasks autonomously derived from the growing potential of digital computers in the mid 20th century and had been widely adopted by the early 1990s Partly in parallel with this concept the perspective of ambient intelligence AmI emerged in the late 1990s Agent technology and AmI have many similarities and the main purpose of this book is to provide an overview of the state of the art of the scientific area that integrates these two The book addresses a wide variety of topics related to agents and AmI including theoretical practical design implementation ethical and philosophical issues The 12 chapters are arranged in four sections The first consists of three chapters discussing ethical and philosophical issues the second part explores various approaches that can be used to develop agent based AmI Systems the third part contains three chapters that share the goal to endow AmI systems with useful properties like intelligence and adaptivity and the last section presents concrete applications of agent based AmI systems This book provides an insight into recent achievements and future challenges at the intersection of agent technology and ambient intelligence and will assist the development of more intelligent flexible effective and user friendly systems as well as posing critical questions about the future of the role of agents within the AmI perspective

Situational Awareness for Assistive Technologies Mehul Bhatt,Hans Werner Gsgen,2012 The development of smart assistive technology for personal living and public environments is an opportunity that has been recently recognized by research labs across the world A particular theme that has garnered attention in many countries is the problem of an aging population The combination of a much larger elderly population and the ever increasing cost of providing full time human care for them means that finding practical assisted living solutions for this group is becoming increasingly important Computing is the obvious choice to provide an answer to this growing problem but to have a real impact computer based assistive technologies will need to possess the ability to interact with and interpret the actions and situations of those they are designed to assist The papers in this book explore the diversity of the field of ambient intelligence as well as the wide range of approaches and variety of applications that may prove to be possible Consideration is given to how space action time and other contexts can be represented and reasoned about for use in sensory mapping multi agent interactions assisted living and even emergency responses Many techniques are examined variety represents one of the most important strengths

of this area meaning that the weakness of one approach can be offset by the capability of others The book consists of research contributions dealing with the crucial notion of situational awareness within assistive smart systems emerging as an overarching concept An applied computer science character has been retained whilst bringing to the fore research projects where formal knowledge representation and reasoning techniques have been demonstrated to be applicable to areas within the broader field of ambient intelligence and smart environments

Touching the Future Technology for Autism?

Joseph Mintz, Miklos Gyori, Morten Aagaard, 2012 International interest in the use of assistive and ambient information and communication technologies to support people with a range of cognitive impairments is growing rapidly Autism spectrum disorders ASDs which affect social skills communicative abilities and behavior are of particular interest The number of diagnosed cases has continued to grow in recent decades and the impairments associated with ASDs mean individuals affected are at risk of social isolation and marginalization Although helping people with autism to overcome their difficulties has always required the joint expertise of various fields the widely shared

Advances in Ambient

Intelligence

Juan Carlos Augusto, Daniel Shapiro, 2007 Ambient Intelligence lies at the confluence of several trends the continued decrease in cost and size of computing technology the increasing availability of networking and communication infrastructure the growing public familiarity comfort with computing artifacts and practical advances in artificial intelligence These developments make it possible to contemplate the ubiquitous deployment of intelligent systems prototypically in smart homes but more broadly in public spaces private automobiles and on individual appliances and hand held devices in applications ranging from entertainment through eldercare to safety critical device control Ambient Intelligence is a young

field As a result it has been natural to wonder what the technology can do to improve the way we live At the same time it is becoming increasingly important to ask What do we want since the intent is to embed technology in new and pervasive ways The contributions in this volume provide a window into the visions and trends currently dominating the area of Ambient Intelligence This publication is divided into three sections The first describes visions for the future of Ambient Intelligence the second addresses core technology of the field and the third provides an analysis of elements of the area which will demand special consideration during the future development of the area *Innovative Applications of Ambient Intelligence: Advances in Smart Systems* Curran, Kevin, 2012-01-31 This book provides perspectives on the convergence of ubiquitous computing intelligent systems research and context awareness with the aim of encouraging the further development of ambient intelligence frameworks and research

Ambient Intelligence Tibor Bosse, Diane J. Cook, Mark Neerincx, Fariba Sadri, 2013-09-13 This book presents recent developments in the field of human aspects in Ambient Intelligence. This field and the associated workshop series addresses multidisciplinary aspects of AmI with human directed disciplines such as psychology, social science, neuroscience, and biomedical sciences. The aim of the workshop series is to get researchers together from these human directed disciplines or working on cross connections of AmI with these disciplines. The focus is on the use of knowledge from these disciplines in AmI applications in order to support humans in their daily living in medical, psychological, and social respects. The book plays an important role to get modellers in the psychological, neurological, social, or biomedical disciplines interested in AmI as a high potential application area for their models. From the other side, the book may make researchers in Computer Science and Artificial and Ambient Intelligence more aware of the possibilities to incorporate more substantial knowledge from the psychological, neurological, social, and biomedical disciplines in AmI architectures and applications.

State of the Art in AI Applied to Ambient Intelligence Juan Carlos Augusto, Andrea Orlandini, 2017-10-15 We are moving towards a future where environments respond to human preferences and needs. In this world, smart devices equipped with intelligent features and the capability to sense, communicate with, and support humans in daily activities will be unremarkable. We already expect our cars to warn us of hazards, track our location, and provide timely route advice, and in the future we will speak to simple machines and hold conversations with more complex systems such as intelligent homes which will help us to monitor conditions, track routine tasks, and program the heating, lighting, garden watering, and entertainment centre. But questions have been raised in recent years as to how intelligent these so-called smart systems or ambient intelligence environments really are. This book, *State of the Art in AI Applied to Ambient Intelligence*, part of the outcome of the Workshop on Artificial Intelligence Techniques for Ambient Intelligence (AITAmI) which has now run for 10 consecutive editions, aims to provide a clear picture of what has been achieved after a decade of discussion. It is representative of the diversity of approaches and issues which are currently being considered and also indicates those avenues which are the most promising for exploration in the next decade. The book provides all those working in the field with an up-to-date reference where they will find inspiration to create better systems for the society of tomorrow.

Ambient Intelligence – Software and Applications – 12th International Symposium on Ambient Intelligence Paulo Novais, Joao Carneiro, Pablo Chamoso, 2022-08-31 This book presents the latest research on Ambient Intelligence (AmI) including software and applications in different areas such as Internet of Things, Multi-Agent Systems, or e-Learning among others. AmI is a paradigm emerging from Artificial Intelligence in which computers are used as proactive tools for assisting people with their day-to-day activities, making everyone's lives more comfortable. Another main concern of AmI originates from the human-computer interaction domain and focuses on offering ways to interact with systems in a more natural way by means of user-friendly interfaces. The published book corresponds to technical and novel works carried out by scientists conducting research within the AmI area in one of the areas mentioned above. The intended

readers are those with mainly technical profiles who are already working in the area of AmI or who want to focus their current work in this area The papers collected in this book were presented at a symposium which was jointly organized by the Universidade do Minho and University of Salamanca The latest installment was held in Salamanca Spain from October 6th to 8th 2021 The authors wish to thank the sponsors IBM Indra Viewnext Global Exchange AEPIA APPIA and AIR Institute

True Visions Emile H.L. Aarts, José Luis Encarnação, 2006-12-13 Ambient intelligence AI refers to a developing technology that will increasingly make our everyday environment sensitive and responsive to our presence The AI vision requires technology invisibly embedded in our everyday surroundings present whenever we need it that will lead to the seamless integration of lighting sounds vision domestic appliances and personal healthcare products to enhance our living experience Written for the non specialist seeking an authoritative but accessible overview of this interdisciplinary field True Visions explains how the devices making up the AI world will operate collectively using information and intelligence hidden in the wireless network connecting them Expert contributions address key AI components such as smart materials and textiles system architecture mobile computing broadband communication and underlying issues of human environment interactions It seeks to unify the perspectives of scientists from diverse backgrounds ranging from the physics of materials to the aesthetics of industrial design as it describes the emergence of ambient intelligence one of today's most compelling areas of innovation

Ambient Intelligence Giuseppe Riva, 2005 The metaphor of Ambient Intelligence AmI tries to picture a vision of the future

where all of us will be surrounded by intelligent electronic environments and this ambient has claims to being sensitive and responsive to our needs Ambient Intelligence without invasion of privacy represents a long term vision for the EU Information Society Technologies Research programme A strong multi disciplinary and collaborative approach is a key requirement for large scale technology innovation and the development of effective applications Up to now most of the books and papers related to AmI focus their analysis on the technology potential only An important feature of this volume is the link between the technology through the concepts of ubiquitous computing and intelligent interface and the human experience of interacting in the world through a neuro psychological vision centred on the concept of presence Presence the sense of being there is the experience of projecting one s mind through media to other places people and designed environments The combination of recent discoveries in cognitive neuroscience which make it possible to acquire a better understanding of the human aspects of presence and the breakthroughs at the level of the enabling technologies make it increasingly possible to build novel systems based on this understanding The goal of this volume is to assess the technologies and processes that are behind the AmI vision in order to help the development of state of the art applications More in detail this volume aims at supporting researchers and scientists interested in the understanding and exploiting the potential of AmI
