Handbook of Forest Resource Economics Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber. Forests provide other key ecosystem services such as being sinks for greenhouse gases, hotspots of biodiversity, tourism and recreation. They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non-timber forest products and supporting the livelihoods of many local people. This handbook provides a detailed, comprehensive and broad coverage of forest economics including traditional forest economics of timber production, economics of environmental role of forests and recent developments in forest economics. The chapters are grouped into six parts: fundamental topics in forest resource economics, economics of forest ecosystems, economics of forests, climate change and bioenergy, economics of risk, uncertainty and natural disturbances, economics of forest property rights and certification, and emerging issues and developments. Thompson,2017-05-25 In this second edition of *The Spirit of the Soil* Agriculture and Environmental Ethics Paul B Thompson reviews four worldviews that shape competing visions for agriculture Productionists have sought increasing yields to make two seeds grow where only one grew before while traditional visions of good farming have stressed stewardship These traditional visions have been challenged by two more worldviews a call for a total cost accounting for farming and an advocacy for a holistic perspective

Thompson argues that an environmentally defensible systems approach must draw upon all four worldviews recognizing their flaws and synthesizing their strengths in a new vision of sustainable agriculture This classic 1995 study has been thoroughly revised and significantly expanded in its second edition with up to date examples of agriculture s impact on the environment These include extensive discussions of new pesticides and the effects of animal agriculture on climate and other areas of the environment In addition a new final chapter discusses sustainability which has become a dominant idea within environmental studies and agrarian political philosophy Advanced Planning in Fresh Food Industries Matthias Lütke Entrup,2006-03-30

Production planning in fresh food industries is a challenging task Although modern Advanced Planning and Scheduling APS systems could provide significant support APS implementation numbers in these industries remain low Therefore based on an in depth analysis of three sample fresh food industries dairy fresh and processed meat the author evaluates what APS systems should offer in order to effectively support production planning and how the leading systems currently handle the most distinguishing characteristic of fresh food industries the short product shelf life Starting from the identified weaknesses customized software solutions for each of the sample industries are proposed that allow to optimize the production of fresh foods with respect to shelf life The book thereby offers valuable insights not only to researchers but also to software providers of APS systems and professionals from fresh food industries
