

Aire acondicionado y refrigeración

CONCEPTO:

El acondicionamiento del aire es el proceso que enfría, limpia y circula el aire, controlando, además, su contenido de humedad. En condiciones ideales logra todo esto de manera simultánea. Como enfriar significa eliminar calor, otro término utilizado para decir refrigeración, el aire acondicionado, obviamente este tema incluye a la refrigeración.

DESARROLLO HISTORICO DEL ACONDICIONAMIENTO DEL AIRE

No obstante que la refrigeración, como la conocemos actualmente, data de unos sesenta años, algunos de sus principios fueron conocidos hace tanto como 10 000 años antes de Cristo.

Uno de los grandes sistemas para suprimir el calor sin duda fue el de los egipcios. Este se utilizaba principalmente en el palacio del faraón. Las paredes estaban construidas de enormes bloques de piedra, con peso superior de 1000 Toneladas y de un lado pulido y el otro áspero.

Durante la noche, 3000 esclavos dismantelaban las paredes y acameaban las piedras a el Desierto del Sáhara. Como la temperatura el en el desierto disminuye notablemente a niveles muy bajos durante el transcurso de la noche, las piedras se enfriaban y justamente antes de que amaneciera los esclavos acameaban de regreso las piedras al sitio donde el palacio y volvían a colocarlas al sitio donde estas se encontraban.

Se supone que el faraón disfrutaba de temperaturas alrededor de los 26.7°C, mientras que afuera estas se encontraban hasta en los 54°C o mas. Como se menciono se necesitaban 3000 esclavos para poder efectuar esta labor de acondicionamiento , lo que actualmente se efectúa fácilmente.

Como funciona un Aire Acondicionado (Clima).

El acondicionador de aire o clima toma aire del interior de una recamara pasando por tubos que están a baja temperatura estos están enfriados por medio de un liquido que a su vez se enfría por medio del condensador, parte del aire se devuelve a una temperatura menor y parte sale expulsada por el panel trasero del aparato, el termómetro esta en el panel frontal para que cuando pase el aire calcule al temperatura a la que esta el ambiente dentro de la recamara, y así regulando que tan frío y que tanto debe trabajar el compresor y el condensador.
