The Theory of the Moiré Phenomenon Isaac Amidror, 2012-12-06. Who has not noticed on one occasion or another those intriguing geometric patterns which appear at the intersection of repetitive structures such as two far picket fences on a hill, the railings on both sides of a bridge, superposed layers of fabric or folds of a nylon curtain. This fascinating phenomenon known as the moiré effect has found useful applications in several fields of science and technology such as metrology, strain analysis, or even document authentication and anti-counterfeiting. However, in other situations, moiré patterns may have an unwanted adverse effect. This is the case in the printing world and in particular in the field of colour reproduction, moiré patterns which may be caused by the dot screens used for colour printing may severely deteriorate the image quality and turn into a real printer's nightmare. The starting point of the work on which this book is based was indeed in the research of moiré phenomena in the context of the colour printing process. The initial aim of this research was to understand the nature and the causes of the superposition moiré patterns between regular screens in order to find how to avoid or at least minimize their adverse effect on colour printing. This interesting research led us, after all, to a much more far-reaching mathematical understanding of the moiré phenomenon whose interest stands in its own right independently of any particular application.

Generalized Blockmodeling Patrick Doreian, Vladimir Batagelj, Anuska Ferligoj, 2005. This book provides an integrated treatment of blockmodeling, the most frequently used technique in social network analysis. It secures its mathematical foundations and then generalizes blockmodeling for the analysis of many types of network structures. Examples are used throughout the text and include small group structures, little league baseball teams, intra-organizational networks, inter-organizational networks, baboon grooming networks, marriage ties of noble families, trust networks, signed networks, Supreme Court decisions, journal citation networks, and alliance networks. Also provided is an integrated treatment of algebraic and graph theoretic concepts for network analysis and a broad introduction to cluster analysis. These formal ideas are the foundations for the authors' proposal for direct optimizational approaches to blockmodeling which yield blockmodels that best fit the data, a measure of fit that is integral to the establishment of blockmodels and creates the potential for many generalizations and a deductive use of blockmodeling.

Serre's Problem on Projective Modules T.Y. Lam, 2010-05-17. Serre's Conjecture for the most part of the second half of the 20th century referred to the famous statement made by J. P. Serre in 1955 to the effect that one did not know if finitely generated projective modules were free over a polynomial ring $k[x_1, \dots, x_n]$ where k is a field. This statement was motivated by the fact that $1 \leq n$ the affine scheme defined by $k[x_1, \dots, x_n]$ is the algebro-geometric analogue of $1 \leq n$ the affine n -space over k . In topology, the n -space is

contractible so there are only trivial bundles over it Would the analogue of the latter also hold for the n space in algebraic geometry Since algebraic vector bundles over $\text{Spec } k[x_1, \dots, x_n]$ correspond to finitely generated projective modules over $k[x_1, \dots, x_n]$ the question was tantamount to whether such projective modules were free for any base field k

It was quite clear that Serre intended his statement as an open problem in the sheaf theoretic framework of algebraic geometry which was just beginning to emerge in the mid 1950s Nowhere in his published writings had Serre speculated one way or another upon the possible outcome of his problem However almost from the start a surmised positive answer to Serre's problem became known to the world as Serre's Conjecture Somewhat later interest in this Conjecture was further heightened by the advent of two new and closely related subjects in mathematics homological algebra and algebraic K theory
