American Plastic Jeffrey L. Meikle, 1995 Meikle traces the course of plastics from 19th century celluloid and the first wholly synthetic bakelite in 1907 through the proliferation of compounds vinyls acrylics nylon etc and recent ecological concerns PUBLISHERS WEEKLY Winner of the 1996 Dexter Prize from the Society for the History of Technology and a 1996 CHOICE Outstanding Academic Book 70 illustrations **American Plastic: a Cultural History** Jeffrey L. Meikle, 1995 Jeffrey Meikle traces Americans ambivalent involvement with plastic from Bakelite radios and nylon stockings to Tupperware and polyester suits He moves easily from the rise of the plastics industry to plastic s symbolic hold on style and the popular imagination Meikle shows how America s enthusiasm for everything plastic has been complicated by environmental doubts and by the plasticity of postmodern existence Throughout this witty compelling history of material and metaphor Meikle raises crucial issues in science and technology manufacturing and marketing design and architecture and American consumer culture A provocative conclusion suggests that plastic endlessly malleable in the face of material desire merges into the immaterial reality of future electronic media **American Plastic** Jeffrey L. Carbon Nation Bob Johnson, 2017-07-15 Fossil fuels don't simply impact our ability to commute to and from work. They condition our sensory lives, our erotic experiences and our aesthetics; they structure what we assume to be normal and healthy, and they prop up a distinctly modern bargain with nature that allows populations and economies to grow wildly beyond the older and more clearly understood limits of the organic economy. *Carbon Nation* ranges across film and literary studies, ecology, politics, journalism, and art history to chart the course by which prehistoric carbon calories entered into the American economy and body. It reveals how fossil fuels remade our ways of being, knowing, and sensing in the world while examining how different classes, races, sexes, and conditions learned to embrace and navigate the material manifestations and cultural potential of these new prehistoric carbons. The ecological roots of modern America are introduced in the first half of the book, where the author shows how fossil fuels revolutionized the nation's material wealth and carrying capacity. The book then demonstrates how this eager embrace of fossil fuels went hand in hand with both a deliberate and an unconscious suppression of that dependency across social, spatial, symbolic, and psychic domains. In the works of Eugene O'Neill, Upton Sinclair, Sherwood Anderson, and Stephen Crane, the author reveals how Americans' material dependencies on prehistoric carbon were systematically buried within modernist narratives of progress, consumption, and unbridled growth. While in films like Charlie Chaplin's *Modern Times* and George Stevens's *Giant*, he uncovers cinematic expressions of our own deep-seated anxieties about living in a dizzying new world wrought by fossil fuels. Any discussion of fossil fuels must go beyond energy policy and technology. In *Carbon Nation*, Bob Johnson reminds us that what we take to be natural in the modern world is in fact historical, and that our history and culture arise from this relatively recent embrace of the coal mine, the stove hole, and the oil derrick

An Introduction to Design and Culture Penny Sparke, 2013 This third edition of *An Introduction to Design and Culture* has been revised and updated throughout to include issues of globalization, sustainability, and digital interactive design. New for this edition is a chapter which covers key changes in design culture. Design culture has changed dramatically in the 21st century; the designer-hero is now much less in evidence, and design has become much more interdisciplinary. Drawing on a wealth of mass-produced artefacts, images, and environments, including sewing machines, cars, televisions, clothes, electronic and branded goods, and exhibitions, author Penny Sparke shows how design has helped to shape and reflect our social and cultural development. This introduction to the development of modern and postmodern design is ideal for undergraduate students

Atmospheric Flight in the Twentieth Century P. Galison, A. Roland, 2013-03-07 All technologies differ from one another They are as varied as humanity's interaction with the physical world Even people attempting to do the same thing produce multiple technologies For example John H White discovered more than 1 000 patents in the 19th century for locomotive smokestacks Yet all technologies are processes by which humans seek to control their physical environment and bend nature to their purposes All technologies are alike The tension between likeness and difference runs through this collection of papers All focus on atmospheric flight a twentieth century phenomenon But they approach the topic from different disciplinary perspectives They ask disparate questions And they work from distinct agendas Collectively they help to explain what is different about aviation how it differs from other technologies and how flight itself has varied from one time and place to another The importance of this topic is manifest Flight is one of the defining

technologies of the twentieth century Jay David Bolter argues in *Turing's Man* that certain technologies in certain ages have had the power not only to transform society but also to shape the way in which people understand their relationship with the physical world A defining technology says Bolter resembles a magnifying glass which collects and focuses seemingly disparate ideas in a culture into one bright sometimes piercing ray 2 Flight has done that for the twentieth century
