Proceedings of the FAO Global Conference on Sustainable Agricultural Mechanization Telemans, B. (ed.), Aschauer, N. (ed.), Kienzle, J. (ed.), Xia, J. (ed.), 2024-06-05 The Global Conference on Sustainable Agricultural Mechanization GAMC organized by FAO from 27 to 29 September 2023 provided a neutral platform for global stakeholders to discuss sustainable agricultural mechanization for agrifood systems transformation The conference covered various themes like crop production post harvest and agroprocessing climate change and resilience digitalization and automation supply chain and standards models and multistakeholder engagement and creating an enabling environment The proceedings feature abstracts of speeches and presentations and culminate in a compelling call to action to guide future efforts for promoting sustainable agricultural mechanization towards 2030 and beyond

An evolving paradigm of agricultural mechanization development: How much can Africa learn from Asia? Synopsis Diao, Xinshen, ed., Takeshima, Hiroyuki. ed., Zhang, Xiaobo, ed., 2020-12-07 Agricultural mechanization in Africa south of the Sahara especially for small farms and businesses requires a new paradigm to meet the needs of the continent s evolving farming systems Can Asia with its recent success in adopting mechanization offer a model for Africa An Evolving Paradigm of Agricultural Mechanization Development analyzes the experiences of eight Asian and five African countries The authors explore crucial government roles in boosting and supporting mechanization from import policies to promotion policies to public good policies Potential approaches presented to facilitating mechanization in Africa include prioritizing market led hiring services eliminating distortions and developing appropriate technologies for the African context The role of agricultural mechanization within overall agricultural and rural transformation strategies in Africa is also discussed The book s recommendations and insights should be useful to national policymakers and the development community who can adapt this knowledge to local contexts and use it as a foundation for further research

Mechanized: Transforming Africa's agriculture value chains Malabo Montpellier Panel, 2018-07-26 The current report Mechanized Transforming Africa s Agriculture Value Chains summarizes the findings of a systematic analysis of what countries at the forefront of progress in mechanization have done right It analyzes which policy decisions were taken and which interventions were implemented to substantially increase the uptake of mechanization The report takes a broad perspective on mechanization including technologies along the entire value chain and how they relate to agricultural development and job creation The report shows what can be done to sustainably mechanize agriculture to increase production and enhance value addition across value chain segments The set of policies and practices that are identified if brought to scale could have significant impact on agricultural transformation in Africa The report provides a roadmap for African governments to take concerted action to deliver on the growth and transformation targets set out by the Malabo Declaration and the Sustainable Development Goals

University,Michigan State University. African Agricultural Mechanization Project,1968 *Agricultural Mechanisation Policies and Strategies in Africa* Commonwealth Secretariat,1991-01-01 In this publication sixteen leading African agricultural engineers present their views on the evolution of agricultural mechanization policies and strategies in Africa since the colonial times Agricultural mechanization remains quite a controversial input in African agriculture in particular that of small holder farmers Conflicting policy prescriptions have been given for the African agricultural mechanization problem by among others socio economists agricultural engineers and politicians from the academic and donor community as well as the national governments The failure of the many Government sponsored tractorization projects initiated in the late 1950 s and early 1960 s has greatly contributed to this policy and strategy conundrum Agriculture in most African countries is still undertaken by using the centuries out handtool technology with entire reliance on human muscle power in about 60 90% of the cultivated land Whereas everybody agrees that this has to change the main question has been on how the change should come about Should African countries go through the evolutionary path from handtool though animal powered to mechanically powered agricultural mechanization as it has happened in the developed countries Or should they aim at skipping the intermediate stage animal powered mechanization The experience of seven African countries Botswana Ghana Kenya Nigeria Swaziland Tanzania and Zambia in agricultural mechanization policy formulation is presented in this volume There are also chapters on the experiences of India and FAO as well as on tropical agriculture This is the first book to present the full range of experiences in agricultural mechanization policy formulation in Africa It is aimed both for development practitioners and policy makers as well as students of agriculture agricultural engineering and economics

Agricultural Mechanization and the Evolution of Farming Systems in Sub-Saharan Africa Prabhu L. Pingali,Yves Bigot,Hans P. Binswanger,Hans P. Binswanger-Mkhize,1987 The slow pace of agricultural mechanization in Africa has long been a puzzle This book begins to solve the puzzle by looking at the conditions in sub Saharan Africa that have led to only

sporadic use of the plow rather than the hand hoe very limited use of tractors and even oxen and the failure of many projects seeking to move directly from hand hoes to tractors The authors interviewed farmers at fifty sites in ten countries They found that the pace of mechanization has been slow in Africa because it often is not cost effective Among the issues discussed in the book are a the effect on yields of substituting plows for hoes b the cost effectiveness of using draft animals as opposed to tractors c conditions under which tractors can be used more efficiently than oxen and d the negative consequences of government interventions to encourage the use of tractors beyond what is economically justified **Sustainable**

Agricultural Mechanization: A Framework for Africa Food and Agriculture Organization of the United Nations,African Union,2019-03-13 This framework presents ten interrelated principles elements to guide Sustainable Agricultural Mechanization in Africa SAMA Further it presents the technical issues to be considered under SAMA and the options to be analysed at the country and sub regional levels The ten key elements required in a framework for SAMA are as follows The analysis in the framework calls for a specific approach involving learning from other parts of the world where significant transformation of the agricultural mechanization sector has already occurred within a three to four decade time frame and developing policies and programmes to realize Africa s aspirations of Zero Hunger by 2025 This approach entails the identification and prioritization of relevant and interrelated elements to help countries develop strategies and practical development plans that create synergies in line with their agricultural transformation plans Given the unique characteristics of each country and the diverse needs of Africa due to the ecological heterogeneity and the wide range of farm sizes the framework avoids being prescriptive **Mechanization and Maize** Constance G. Anthony,1988 This book explores the puzzling phenomenon of new veiling practices among lower middle class women in Cairo Egypt Although these women are part of a modernizing middle class they also voluntarily adopt a traditional symbol of female subordination How can this paradox be explained An explanation emerges which reconceptualizes what appears to be reactionary behavior as a new style of political struggle as accommodating protest These women most of them clerical workers in the large government bureaucracy are ambivalent about working outside the home considering it a change which brings new burdens as well as some important benefits At the same time they realize that leaving home and family is creating an intolerable situation of the erosion of their social status and the loss of their traditional identity The new veiling expresses women s protest against this MacLeod argues that the symbolism of the new veiling emerges from this tense subcultural dilemma involving elements of both resistance and acquiescence **Appropriate Mechanization of Small Farms in Africa** ,1980 *Agricultural Mechanization in Sub-Saharan Africa* Karim Houmy,2013 The manual work carried out by farmers and their families is often both arduous and time consuming and in many countries this is a major constraint to increasing agricultural production Such day to day drudgery is a major contributing factor in the migration of people particularly the young from the rural countryside to seek the prospect of a better life in the towns and cities Farm production can be substantially increased

through the use of mechanical technologies which both are labor saving and directly increase yields and production This document provides guidelines on the development and formulation of an agricultural mechanization strategy and forms part of FAO's approach on sustainable production intensification

Agricultural Mechanization in Africa: Insights from Ghana's Experience Xinshen Diao, 2022

Agricultural mechanization and agricultural transformation Diao,

Xinshen, Silver, Jed, Takeshima, Hiroyuki, 2016-04-29 A renewed focus on agriculture's potential contribution to economic transformation in Africa has resulted in increased attention paid to agricultural mechanization African agriculture still relies predominantly on human muscle power despite anecdotal evidence on urbanization and rising rural wages in contrast to other developing regions that have experienced rapid increases in agricultural mechanization during the past few decades Past state led mechanization pushes in Africa often failed due to insufficient understanding of the nature of demand for mechanization technologies among farmers and insufficient knowledge of private sector functions This background paper reviews the factors likely to influence farmer demand for mechanization in Africa and details different existing and potential mechanization supply models Although an empirical analysis of mechanization demand and the effectiveness of supply chains is beyond the scope of this paper in part due to data limitations this paper suggests that demand for mechanization may be emerging in some parts of Africa It also suggests that private sector driven supply models are better positioned to meet this demand than direct government involvement and certain types of subsidized programs The paper then identifies possible areas for government support to complement private sector leadership in developing mechanization supply chains Nevertheless significant further research is required to better understand the changing nature of mechanization demand in Africa and the extent and effectiveness of different supply models in meeting it

Xinshen Diao, Jed Silver, Hiroyuki Takeshima, 2017-12 *Agricultural Mechanization in Sub-Saharan Africa*, 2013 The manual work carried out by farmers and their families is often both arduous and time consuming and in many countries this is a major constraint to increasing agricultural production Such day to day drudgery is a major contributory factor in the migration of people particularly the young from the rural countryside to seek the prospect of a better life in the towns and cities Farm production can be substantially increased through the use of mechanical technologies which are both labour saving and directly increase yields and production The necessary inputs are carefully selected tools machines and equipment Such technological interventions are commonly referred to as agricultural mechanization and a judicious choice is crucial for farmers to achieve optimum profitability from their businesses and to attain an acceptable quality of life for themselves and their families The choice can also have a major impact on the environment only the use of those which have a positive effect

can be sustainable over the long term It is therefore important to identify appropriate mechanization strategies with particular emphasis on increased production farmers livelihoods and environmentally sustainable options This document provides guidelines on the development and formulation of an agricultural mechanization strategy and forms part of FAO s approach on sustainable production intensification Publisher s description **An Economic Analysis of Small Farm Mechanization in Western Province, Kenya** Willis Oluoch-Kosura,1984 The Agricultural Mechanization in Africa Oliver K. Kirui,2019 This paper examines the state drivers and consequently the impacts of agricultural mechanization in eleven countries in Africa Using representative multistage stratified household survey data and robust analytical approaches findings show light hand held tools and equipment remain the main type of machinery in most countries about 48% of the sampled households have access to light machinery compared to 35% that have access to animal powered machinery and only about 18% that use tractor powered machinery Significant drivers of agricultural mechanization include the size of the household gender of the household head participation in off farm economic activities distance to the input and output markets farm size land tenure type of farming system access to extension services and use of fertilizer and pesticides This study finds that after controlling for socio economic demographic and regional determinants agricultural mechanization significantly increases the amount of cropland cultivated extensification and is also accompanied by input intensification especially in countries where land expansion is limited We further find significant but mixed impact of agricultural mechanization on use of household and hired labor Finally agricultural mechanization significantly raises the productivity of maize and rice in all cases These findings point to the importance of developing favorable arrangements that would avail mechanization to small and medium scale farmers This would involve providing incentives for private sector to scale agricultural mechanization initiatives and targeting and engaging women farmers and the youth by investing in supportive infrastructure and training Agricultural Mechanization Hans P.
