assessment this book pulls together vital information from both the science and engineering aspects of performing air toxic risk assessment and combines them with the practical concerns involved to provide a comprehensive look at this complex process. Clearly drawn examples, practical exercises and an extensive list of related resources are included making this book an excellent learning tool as well as a valuable quick reference resource. 110 illustrations. Pesticides in Southeast Asia Peter Kunstadter, 2007. This much needed collection of research by international and multidisciplinary experts explores the economic, environmental and health benefits as well as harmful consequences of pesticide use in Thailand and elsewhere in Southeast Asia. Population growth, the expansion of world trade, increased demands for quantity and quality of agricultural and other commodities and the need to control vector borne diseases over the past sixty years have given rise to a proliferation of synthetic chemical pesticides in both developed and developing nations. Since the publication of Rachel Carson's *Silent Spring* in 1962, the easily perceived immediate benefits of pesticides have been tempered by concerns about their more subtle long term environmental and health consequences. The use of pesticides is often justified as beneficial in economic terms but the amounts and allocations of the direct and indirect costs have come into question. The book includes descriptions of pests and the pesticides used to control them. Authors give several perspectives on questions of safety, cost and benefit for the environment, economy and public health. Representatives of pesticide and commodity producers argue for the low risk benefits of pesticides if they are properly used; research scientists present information on health and environmental consequences of the actual patterns of use by farmers; economists present data on costs and their allocation; and development agency representatives describe methods of reducing hazards through farmers field schools and integrated pest management and discuss the procedures and problems of international control of pesticides. **Standard Handbook of Environmental Science, Health, and Technology** Jay H. Lehr, Janet K. Lehr, 2000.
