Fault Detection, Supervision and Safety for Technical Processes 1991 B. Freyermuth, R. Isermann, 2014-05-23 These Proceedings provide a general overview as well as detailed information on the developing field of reliability and safety of technical processes in automatically controlled processes. The plenary papers present the state of the art and an overview in the areas of aircraft and nuclear power stations because these safety critical system domains possess the most highly developed fault management and supervision schemes. Additional plenary papers covered the recent developments in analytical redundancy. In total there are 95 papers presented in these Proceedings. Electro Hydraulic Control Theory and Its Applications Under Extreme Environment Yaobao Yin, 2019-02-16 Electro hydraulic Control Theory and Its Applications under Extreme Environment not only presents an overview on the topic but also delves into the fundamental mathematic models of electro hydraulic control and the application of key hydraulic components under extreme environments. The book contains chapters on hydraulic system design including thermal analysis on hydraulic power systems in aircraft power matching designs of hydraulic rudder and flow matching control of asymmetric valves and cylinders. With additional coverage on new devices experiments and application technologies this book is an ideal reference on the research and development of significant equipment. Addresses valves application in aircrafts including servo valves relief valves and pressure reducing valves. Presents a qualitative and quantitative forecast of future electro hydraulic servo systems service performance and mechanization in harsh environments. complemented by ethical analyses of the moral status of technical artefacts and the possibilities and impossibilities for engineers to influence this status when designing artefacts and the sociotechnical systems in which artefacts are embedded The running example in the book is aviation where aeroplanes are examples of technical artefacts and the world aviation system is an example of a sociotechnical system Issues related to the design of quiet aeroplane engines and the causes of aviation accidents are analysed for illustrating the moral status of designing and the role of engineers therein Table of Contents Technical Artefacts Technical Designing Ethics and Designing Technological Knowledge Sociotechnical Systems The Role of Social Factors in Technological Development Ethics and Unintended Consequences of Technology
