Notes

- Micrometastases are diagnosed after sentinel lymph node biopsy and completion lymphadenectomy (if performed).
- Macrometastases are defined as clinically detectable nodal metastases confirmed by therapeutic lymphadenectomy or when nodal metastasis exhibits gross extracapsular extension.
- Clinical staging includes macrostaging of the primary melanoma and clinical/radiologic evaluation for metastases. By convention, it should be used after complete resection of the primary melanoma with clinical assessment for regional and distant metastases.
- Pathologic staging includes microstaging of the primary melanoma and pathologic information about the regional lymph nodes after partial or complete lymphadenectomy. Pathologic Stage 0 or Stage IA patients are the exception; they do not require pathologic evaluation of their lymph nodes.
