

Chapter 1 Quiz 2

Sections 1.4 through 1.6

Do you know NOW?

Solve each equation. Check your answers.

1. $2x - 3 = 5 + 3$

2. $\frac{1}{2}(x + 4) = x + 3$

3. Write an inequality for each problem. Then solve the equation. Make at least one more than for each. You have to remember that the change more, less. The rate of change is for these all on the same change!

Solve each inequality. Graph the solution.

4. $2x - 3 < 5 + 3$

5. $-2x + 3 < 5$ and $3 - 2x < 5$

6. The city's response of water treatment has not been fast. 40% of the water from 40% of water will come in the next several decades. Currently, there are 200,000 people in the city. How many people will come in the next decade?

Solve each equation. Check for extraneous solutions.

7. $2x + 3 = 5 + 3$

8. $x + 3 = 2x + 1$

9. Solve the inequality $\frac{1}{2}(x + 4) = x + 3$ and graph the solution.

10. In a class of 200 students, 12% of 200 and 10% of 200 is added to a million. Let x be the amount of money. Write an absolute value inequality describing the amount of money added.

Do you UNDERSTAND?

11. **Writing** Suppose the rate of change in the number of people is 100. How can you find the time constant?

12. **Compare and Contrast** How do the solutions to $x + 1 = 3$ and $x + 1 = 3$ differ?

Chapter 1 Test

Do you know NOW?

Identify a pattern and find the next three numbers in the pattern.

1. $-4, -1, 2, 5$

2. $1, 3, 5, 7, 9, 11$

3. Identify each way by naming the property used.

a. $4(-1) = 4(-1)$

b. $-4(-1) = 4$

c. $-4(-1) = 4$

d. $-4(-1) = 4$

Evaluate the expression for the given value of the variable.

4. $x^2 + 4x - 3$, $x = 5$

5. $\frac{1}{2}(x + 4) = x + 3$, $x = 2$

6. The expression $10.00 + 0.40x$ models the daily cost in dollars of renting a car. In the expression, x represents the number of miles the car is driven. What is the cost of renting a car for a day when the car is driven 100 miles?

Solve each equation.

7. $2x + 3 = 5 + 3$

8. $x + 3 = 2x + 1$

Solve each equation for x . State any restrictions on the variables.

9. $x + 3 = 2x + 1$

10. $\frac{1}{2}(x + 4) = x + 3$

Solve each formula for the indicated variable.

11. $P = \frac{1}{2}(x_1 + x_2)$, for x_2

12. $P = 2x + 3y$, for x

Prentice Hall Algebra 2 Prentice Hall (School Division),2002-09 Practice in Mathematics Pearson Education, Limited,2007 **Learning Through Teaching Mathematics** Roza Leikin,Rina Zazkis,2010-04-10 The idea of teachers Learning through Teaching LTT when presented to a na ve bystander appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn As evident in this book the experience of teaching presents teachers with an exciting opp tunity for learning throughout their entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT is acknowledged by multiple researchers and mathematics educators In the rst chapter Leikin and Zazkis review literature that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT p cesses The authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning **Prentice Hall Algebra 1** Jan Fair,1992 Prentice Hall Math Algebra 2 Study Guide and Practice Workbook 2004c Prentice-Hall Staff,2003-12 Prentice Hall Mathematics offers comprehensive math content coverage introduces basic mathematics concepts and skills and provides numerous opportunities to access basic skills along with abundant remediation and intervention activities *Guided Problem Solving Workbook, Succed with Word Problems!- Prentice Hall Mathematics* ,2006 *The Pearson Guide To Complete Mathematics For Iit-Jee* Khattar, **Prentice Hall Middle Grades Mathematics** ,1995 *The Pearson Guide to Quantitative Aptitude for Competitive Examination* Dinesh Khattar,2008-09 **Math Insights Tb S3 S/e** ,2007 **Introduction to Precise Numerical Methods** Oliver Aberth,2007-04-11 Precise numerical analysis may be defined as the study of computer methods for solving mathematical problems either exactly or to prescribed accuracy This book explains how precise numerical analysis is constructed The book also provides exercises which illustrate points from the text and references for the methods presented Clearer simpler descriptions and explanations of the various numerical methods Two new types of numerical problems accurately solving partial differential equations with the included software and computing line integrals in the complex plane *Flexible Robot Dynamics and Controls* Rush D. Robinett III,John Feddema,G. Richard Eisler,Clark Dohrmann,Gordon G. Parker,David G. from several students and many late nights have produced a book that should provide an upper level undergraduate and graduate textbook and a reference for experienced professionals The content of this book spans several disciplines including structural dynamics system identification optimization and linear digital and nonlinear control theory which are developed from several points of view including electrical mechanical and aerospace engineering as well as engineering mechanics As a result the authors believe that this book demonstrates the value of solid applied theory when developing hardware solutions to real world problems The reader will find many real world applications in this book and will be shown the applicability of these techniques beyond flexible structures which in turn shows the value of multidisciplinary education and teaming

Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Numerical Quadrature and Solution of Ordinary Differential Equations A.H. Stroud, 2012-12-06 This is a textbook for a one semester course on numerical analysis for senior undergraduate or beginning graduate students with no previous knowledge of the subject The prerequisites are calculus some knowledge of ordinary differential equations and knowledge of computer programming using Fortran Normally this should be half of a two semester course the other semester covering numerical solution of linear systems inversion of matrices and roots of polynomials Neither semester should be a prerequisite for the other This would prepare the student for advanced topics on numerical analysis such as partial differential equations We are philosophically opposed to a one semester survey or numerical methods course which covers all of the above mentioned topics plus perhaps others in one semester We believe the student in such a course does not learn enough about anyone topic to develop an appreciation for it For reference Chapter I contains statements of results from other branches of mathematics needed for the numerical analysis The instructor may have to review some of these results Chapter 2 contains

basic results about interpolation We spend only about one week of a semester on interpolation and divide the remainder of the semester between quadrature and differential equations Most of the sections not marked with an can be covered in one semester The sections marked with an are included as a guide for further study The Pearson Guide to Quantitative Aptitude for Professional-Course Examinations Khattar,2007-09 **Basic Applied Mathematics For The Physical Sciences** Sarma,2009-09 The Pearson Guide To Mathematics For The Iit-Jee, 3/E Khattar Dinesh,2010-09 Math Insights S2a N/t Wb ,2008 Intermediate Microeconomics Steve Erfle,2017-09-14 The overarching premise of this text is that microeconomics is most effectively learned in an active learning interactive environment Students have access to more than 200 Interactive Excel Figures in the online text that allow them to move the graphs using sliders and click boxes This interactivity helps students understand how graphic elements relate to one another These files do not require knowledge of Excel More figures than are typical and many of the figures involve multiple scenarios of the same basic graph Often the text employs interactive questions that require interpreting these scenarios questions posed are answered at the bottom of the page Despite the geometric orientation this text is not light on algebraic analysis The geometry is backed up by the relevant algebra More than 500 equations are numbered for easy reference both within and across chapters And just like the geometry the algebra is essentially error free because it was used to create the graphs The geometric orientation is perfect for the non calculus enhanced classroom but the text can be readily used in a calculus based class because a calculus treatment of the material is provided in appendices and endnotes and calculus based problems are included in the Intermediate Microeconomics An Interactive Approach Workbook **Numerical Methods for Roots of Polynomials - Part II** J.M. McNamee,V.Y. Pan,2013-07-19 We discuss the secant method where are initial guesses In the Regula Falsi variation we start with initial guesses and such that after an iteration similar to the above we replace either a or b by the new value depending on which of or has the same sign as Often one of the points gets stuck and several variants such as the Illinois or Pegasus methods and variations are used to unstick it We discuss convergence and efficiency of most of the methods considered We treat methods involving quadratic of higher order interpolation and rational approximation We also discuss the bisection method where again and we set We replace a or b by c according to the sign of as in the Regula Falsi method Various generalizations are described including some for complex roots Finally we consider hybrid methods involving two or more of the previously described methods
