Reetz, 2006-11-15      Integrable Systems and Algebraic Geometry: Volume 1 Ron Donagi, Tony Shaska, 2020-04-02

Created as a celebration of mathematical pioneer Emma Previato this comprehensive book highlights the connections between algebraic geometry and integrable systems differential equations mathematical physics and many other areas The authors many of whom have been at the forefront of research into these topics for the last decades have all been influenced by Previato's research as her collaborators students or colleagues The diverse articles in the book demonstrate the wide scope of Previato's work and the inclusion of several survey and introductory articles makes the text accessible to graduate students and non experts as well as researchers This first volume covers a wide range of areas related to integrable systems often emphasizing the deep connections with algebraic geometry Common themes include theta functions and Abelian varieties Lax equations integrable hierarchies Hamiltonian flows and difference operators These powerful tools are applied to spinning top Hitchin Painlevé and many other notable special equations      Differential Geometric Methods in Mathematical Physics Pedro L. Garcia, Antonio Perez-Rendon, 2006-11-15 The focal topic of the 14th International Conference on Differential Geometric Methods was that of mathematical problems in classical field theory and the emphasis of the resulting proceedings volume is on superfield theory and related topics and classical and quantized fields      Topological Quantum Field Theory and Four Manifolds Jose Labastida, Marcos Marino, 2005-02-14 The emergence of topological quantum field theory has been one of the most important breakthroughs which have occurred in the context of mathematical physics in the last century a century characterized by independent developments of the main ideas in both disciplines physics and mathematics which has concluded with two decades of strong interaction between them where physics as in previous centuries has acted as a source of new mathematics Topological quantum field theories constitute the core of these phenomena although the main driving force behind it has been the enormous effort made in theoretical particle physics to understand string theory as a theory able to unify the four fundamental interactions observed in nature These theories set up a new realm where both disciplines profit from each other Although the most striking results have appeared on the mathematical side theoretical physics has clearly also benefited since the corresponding developments have helped better to understand aspects of the fundamentals of field and string theory      *Darboux Transformations in Integrable Systems* Chaohao Gu, Anning Hu, Zixiang Zhou, 2006-07-09 The Darboux transformation approach is one of the most effective methods for constructing explicit solutions of partial differential equations which are called integrable systems and play important roles in mechanics

physics and differential geometry This book presents the Darboux transformations in matrix form and provides purely algebraic algorithms for constructing the explicit solutions A basis for using symbolic computations to obtain the explicit exact solutions for many integrable systems is established Moreover the behavior of simple and multi solutions even in multi dimensional cases can be elucidated clearly The method covers a series of important equations such as various kinds of AKNS systems in  $R^{1,n}$  harmonic maps from 2 dimensional manifolds self dual Yang Mills fields and the generalizations to higher dimensional case theory of line congruences in three dimensions or higher dimensional space etc All these cases are explained in detail This book contains many results that were obtained by the authors in the past few years Audience The book has been written for specialists teachers and graduate students or undergraduate students of higher grade in mathematics and physics

Geometric Methods in Mathematical Physics G. Kaiser, J.E. Marsden, 2006-11-14 For too many students mathematics consists of facts in a vacuum to be memorized because the instructor says so and to be forgotten when the course of study is completed In this all too common scenario young learners often miss the chance to develop skills specifically reasoning skills that can serve them for a lifetime The elegant pages of Teaching Mathematical Reasoning in Secondary School Classrooms propose a more positive solution by presenting a reasoning and discussion based approach to teaching mathematics emphasizing the connections between ideas or why math works The teachers whose work forms the basis of the book create a powerful record of methods interactions and decisions including dealing with challenges and impasses involving this elusive topic And because this approach shifts the locus of authority from the instructor to mathematics itself students gain a system of knowledge that they can apply not only to discrete tasks relating to numbers but also to the larger world of people and the humanities A sampling of the topics covered Whole class discussion methods for teaching mathematics reasoning Learning mathematical reasoning through tasks Teaching mathematics using the five strands Classroom strategies for promoting mathematical reasoning Maximizing student contributions in the classroom Overcoming student resistance to mathematical conversations Teaching Mathematical Reasoning in Secondary School Classrooms makes a wealth of cutting edge strategies available to mathematics teachers and teacher educators This book is an invaluable resource for researchers in mathematics and curriculum reform and of great interest to teacher educators and teachers
