Geoffrey Vining, 2017-05-03 Søren Bisgaard was an extremely productive and insightful scholar of modern industrial statistics and quality engineering. This compilation collects 31 of his works and is divided into four broad areas: Design and Analysis of Experiments, Time Series Analysis, The Quality Profession, Healthcare Engineering. This book provides a comprehensive coverage of essential statistical methods for the 2k factorial system and shows the basic principles of time series analysis through examples. Furthermore, this book presents the connection between the application of the scientific method and quality improvement and it points out the importance of quality improvement to tangible financial results.
