Manuel general de l'instruction primaire ,1953 A History of Non-Euclidean Geometry Boris A. Rosenfeld,2012-09-08 The Russian edition of this book appeared in 1976 on the hundred and fiftieth anniversary of the historic day of February 23 1826 when Lobachevskii delivered his famous lecture on his discovery of non Euclidean geometry The importance of the discovery of non Euclidean geometry goes far beyond the limits of geometry itself It is safe to say that it was a turning point in the history of all mathematics The scientific revolution of the seventeenth century marked the transition from mathematics of constant magnitudes to mathematics of variable magnitudes During the seventies of the last century there occurred another scientific revolution By that time mathematicians had become familiar with the ideas of non Euclidean geometry and the algebraic ideas of group and field all of which appeared at about the same time and the later ideas of set theory This gave rise to many geometries in addition to the Euclidean geometry previously regarded as the only conceivable possibility to the arithmetics and algebras of many groups and fields in addition to the arithmetic and algebra of real and complex numbers and finally to new mathematical systems i.e sets furnished with various structures having no classical analogues Thus in the 1870 s there began a new mathematical era usually called until the middle of the twentieth
