

Macroeconomics I: European perspective

Introductory lecture

Macroeconomics

- The big picture
- What happens to (parts of) entire economies?
- Income, growth, unemployment, inflation, etc.
- Relationships between these variables
- Globalisation
 - o Goods, services, capital, people
- Economic shocks
- Government policies
- Importance of institutions
 - o European Union, exchange rate mechanism, labour markets, etc.

Output and time

"The most important goal of macroeconomics is to develop an understanding of what makes income differ between countries and what makes them grow or fluctuate over time" (Gartner, p. 36)

- Analysing equilibrium
- Comparing equilibriums
- How do countries move between equilibriums?
- Different time frames
 - o Different processes
 - o Different variables
 - o Different policies

Short and long run

- Analysis and explanations depend on time frame
- Key: what do we assume about prices?

Quantity equation $M \times V = P \times Y$

(V assumed fixed)

Long run: Y determined by production factors $\Delta M = \Delta P$

Short run: Y determined by M

$\Delta M = \Delta Y$ P assumed fixed

Aggregate supply curve

Two cases:

Y-axis = Output = GDP

methods like this financial economics could become a branch of science like any other To buttress this approach the widely accepted public policy objective of promoting real economy price stability could be widened to include financial price stability
