Multimedia Computing Systems and Virtual Reality Rajeev Tiwari, Neelam Duhan, Mamta Mittal, Abhineet Anand, Muhammad Attique Khan, 2022-04-05 Most events and activities in today's world are ordinarily captured using photos, videos, and other multimedia content. Such content has some limitation of storing data and fetching them effectively. Three-dimensional continuous PC animation is the most proper media to simulate these occasions and activities. This book focuses on futuristic trends and innovations in multimedia systems using big data, IoT, and cloud technologies. The authors present recent advancements in multimedia systems as they relate to various application areas such as healthcare services and agriculture-related industries. The authors also discuss human-machine interface design, graphics modelling, rendering, animation, image graphics techniques, systems, and visualization. They then go on to explore multimedia content adaptation for interoperable delivery. Finally, the book covers cultural heritage, philosophical, ethical, societal, international issues, standards, related virtual technology, and multimedia uses. This book is intended for computer engineers and computer scientists developing applications for multimedia and virtual reality and professionals working in object design and visualization, transformation, modelling, and animation of the real world. **Features:** Focuses on futuristic trends and innovations in multimedia systems using big data, IoT, and cloud technologies. Offers opportunity for state-of-the-art approaches, methodologies, and systems and innovative use of multimedia-based emerging technology services in different application areas. Discusses human-machine interface design, graphics modelling, rendering, animation, image graphics techniques, systems, and visualization. Covers cultural heritage, philosophical, ethical, societal, international issues, standards, related virtual technology, and multimedia uses. Explores multimedia content adaptation for interoperable delivery and recent advancements in multimedia systems in context to various application areas such as healthcare services and agriculture-related fields.

Enabling Technologies and Architectures for Next-Generation Networking Capabilities Elkhodr, Mahmoud, 2018-10-19 With the rise of mobile and wireless technologies, more sustainable networks are necessary to support communication. These next-generation networks can now be utilized to extend the growing era of the Internet of Things. *Enabling Technologies and Architectures for Next-Generation Networking Capabilities* is an essential reference source that explores the latest research and trends in large-scale 5G technologies, deployment, software-defined networking, and other emerging network technologies. Featuring research on topics such as data management, heterogeneous networks, and spectrum sensing, this book is ideally designed for computer engineers, technology developers, network administrators, and researchers, professionals, and graduate-level students seeking coverage on current and future network technologies. **Security and Privacy Issues for IoT and WSN-based Real-time Applications** Manoj Tolani, Arun Balodi, Ambar Bajpai, Vishal Jain, Piya Kovintavewat, 2025-06-16 This book explores the security and privacy challenges associated with real-time applications of the Internet of Things, IoT, and wireless sensor networks, WSN technologies. It provides detailed insights into the unique security and privacy concerns such

as malicious attacks data breaches insider threats and privacy breaches that arise in the context of real time applications like in smart homes smart cities industrial automation healthcare and other time sensitive domains to offer practical solutions and strategies to mitigate these risks Covers various aspects of security and privacy including authentication access control data integrity confidentiality availability threat detection and mitigation privacy preserving techniques Investigates the possibilities of cross layer approaches to address the specific requirements of real time applications and develop innovative solutions Gaining insights into fundamental limits through information theoretic research new protocol designs are developed to access the medium in an energy efficient manner to improve the performance and reliability of WSN and IoT networks for real time applications Discusses the sustainable requirements of emerging real time applications such as low energy consumption and high data rates Offers an interdisciplinary approach that encompasses areas of communication networking and information theory to guide real life deployment of IoT WSN based monitoring systems It is a valuable reference for readers who want to gain a deeper understanding of the challenges and solutions related to the security and privacy of IoT and WSN in the context of real time applications

Signal Processing and Machine Learning for Biomedical Big Data Ervin Sejdic, Tiago H. Falk, 2018-07-04 Within the healthcare domain big data is defined as any high volume high diversity biological clinical environmental and lifestyle information collected from single individuals to large cohorts in relation to their health and wellness status at one or several time points Such data is crucial because within it lies vast amounts of invaluable information that could potentially change a patient's life opening doors to alternate therapies drugs and diagnostic tools Signal Processing and Machine Learning for Biomedical Big Data thus discusses modalities the numerous ways in which this data is captured via sensors and various sample rates and dimensionalities Capturing analyzing storing and visualizing such massive data has required new shifts in signal processing paradigms and new ways of combining signal processing with machine learning tools This book covers several of these aspects in two ways firstly through theoretical signal processing chapters where tools aimed at big data be it biomedical or otherwise are described and secondly through application driven chapters focusing on existing applications of signal processing and machine learning for big biomedical data This text aimed at the curious researcher working in the field as well as undergraduate and graduate students eager to learn how signal processing can help with big data analysis It is the hope of Drs Sejdic and Falk that this book will bring together signal processing and machine learning researchers to unlock existing bottlenecks within the healthcare field thereby improving patient quality of life Provides an overview of recent state of the art signal processing and machine learning algorithms for biomedical big data including applications in the neuroimaging cardiac retinal genomic sleep patient outcome prediction critical care and rehabilitation domains Provides contributed chapters from world leaders in the fields of big data and signal processing covering topics such as data quality data compression statistical and graph signal processing techniques and deep learning and their applications within the biomedical sphere This book's material covers how

expert domain knowledge can be used to advance signal processing and machine learning for biomedical big data applications

The Asia Pacific region home to some of the world's fastest growing economies faces a range of complex challenges including environmental degradation the increasing frequency of natural hazards and rapid urbanization Addressing these issues which many countries across the globe are facing requires innovative interdisciplinary approaches to promote sustainable development and enhance resilience Geographic information systems GIS when combined with multi criteria decision making MCDM techniques and advanced technologies such as artificial intelligence AI offer powerful tools to tackle these multifaceted problems AIGIS integrates AI with GIS to derive insights from geospatial data The fusion of AI techniques with GIS enhances data analysis visualization and decision making Artificial Intelligence Geographic Information Systems and Multi Criteria Decision Making for Improving Sustainable Development explore how these integrated tools can support decision making processes aimed at advancing sustainable development Drawing on research and insights from diverse disciplines the book looks at how GIS MCDM and AI can provide solutions for disaster risk reduction environmental monitoring urban planning and natural resource management Through diverse case studies and theoretical explorations this book highlights the value of integrated geospatial tools in facilitating informed decision making and fostering resilient societies in the face of evolving challenges It covers a wide range of topics including the following Site soil geology assessments in Fiji Flood risk analysis in Hong Kong Air quality management in Delhi during the COVID 19 pandemic Vegetation health monitoring in Thailand Bringing together the work of academicians practitioners and decision makers the book reflects the growing recognition towards effective and sustainable solutions to complex problems which require a multidimensional approach integrating scientific economic and social considerations By providing the latest research and practical applications of MCDM AI and GIS it contributes to ongoing efforts to build a more sustainable and resilient future for the Asia Pacific region as well as for the world

Secure Edge Computing Mohiuddin Ahmed, Paul Haskell-Dowland, 2021-08-12

The internet is making our daily life as digital as possible and this new era is called the Internet of Everything IoE Edge computing is an emerging data analytics concept that addresses the challenges associated with IoE More specifically edge computing facilitates data analysis at the edge of the network instead of interacting with cloud based servers Therefore more and more devices need to be added in remote locations without any substantial monitoring strategy This increased connectivity and the devices used for edge computing will create more room for cyber criminals to exploit the system's vulnerabilities Ensuring cyber security at the edge should not be an afterthought or a huge challenge The devices used for edge computing are not designed with traditional IT hardware protocols There are diverse use cases in the context of edge computing and Internet of Things IoT in remote locations However the cyber security configuration and software

updates are often overlooked when they are most needed to fight cyber crime and ensure data privacy Therefore the threat landscape in the context of edge computing becomes wider and far more challenging There is a clear need for collaborative work throughout the entire value chain of the network In this context this book addresses the cyber security challenges associated with edge computing which provides a bigger picture of the concepts techniques applications and open research directions in this area In addition the book serves as a single source of reference for acquiring the knowledge on the technology process and people involved in next generation computing and security It will be a valuable aid for researchers higher level students and professionals working in the area
