Making Hard Decisions Chapter 13 Solutions:

Decision Making in Systems Engineering and Management Gregory S. Parnell, Patrick J. Driscoll, Dale L.

Henderson, 2011-03-16 Decision Making in Systems Engineering and Management is a comprehensive textbook that provides a logical process and analytical techniques for fact based decision making for the most challenging systems problems. Grounded in systems thinking and based on sound systems engineering principles, the systems decisions process SDP leverages multiple objective decision analysis, multiple attribute value theory, and value focused thinking to define the problem, measure stakeholder value, design creative solutions, explore the decision trade off space in the presence of uncertainty, and structure successful solution implementation. In addition to classical systems engineering problems, this approach has been successfully applied to a wide range of challenges including personnel recruiting, retention, and management, strategic policy analysis, facilities design, and management resource allocation. Information assurance, security systems design, and other settings whose structure can be conceptualized as a system. *Everything you ever wanted to know to stop foreclosure.....but were afraid to ask* ,

A Healthcare Solution Mark A. Vonderembse, David D.

Dobrzykowski, 2016-10-14 The evidence is undeniable. By any measure, the US spends more on healthcare than any other country in the world, yet its health outcomes, as measured by longevity, are in the bottom half among developed countries, and its health related quality of life has remained constant or declined since 1998. In addition to high costs and lower than expected outcomes, the healthcare delivery system is plagued by treatment delays, as it can take weeks to see a specialist, and many people have limited or no access to care. Part of the challenge is that the healthcare delivery system is a large, complex, and sophisticated value creation chain. Successfully changing this highly interconnected system is difficult and time consuming because the underlying problems are hard to comprehend, the root causes are many, the solution is unclear, and the relationships among problems, causes, and solutions are multifaceted. To address these issues, the book carefully explains the underlying problems, examines their root causes using information, data, and logic, and presents a comprehensive and integrated solution that addresses these causes. These three steps are the methodological backbone of this book. A solution depends on understanding and applying the principles of patient centered care (PCC) and resource management. PCC puts patients supported by their primary care physicians back in the role as decision makers and depends on patients being responsible for their health, including making good life style choices. After all, the best way to reduce healthcare costs and increase quality of life is to improve our health and wellness, and as a result, need less care. In addition, health insurance must be rethought and redesigned so it is less likely to lead to overuse. For many people with health insurance, the out of pocket cost of healthcare is small, so healthcare decision making is often biased toward consumption. Effective resource management means that healthcare providers must do a better job of acquiring and using resources in order to provide care quickly, productively, and correctly. This means improving healthcare strategy and management, accelerating the use of

information technology making drug costs affordable and fair reducing the incidence of malpractice and rebuilding the provider network In addition implementation is difficult because there are many participants in the healthcare delivery value chain such as physicians nurses and medical technicians as well as many provider organizations such as hospitals clinics physician offices and labs Further up the value chain there are pharmaceutical companies equipment providers and other suppliers These participants have diverse and sometimes conflicting goals but each must be willing to accept change and work in a coordinated manner to improve healthcare To overcome these problems strong national leadership is needed to get the attention and support from the people and organizations involved in healthcare and to make the comprehensive changes that will lower healthcare costs improve healthcare quality eliminate delays increase access and enhance patient satisfaction
