

Physiotherapeutic approach of management in mechanically ventilated patient.

Mechanical ventilation (MV) is one of the most common interventions in the intensive care unit (ICU). Physical therapy includes early mobilisation to improve functional outcomes. Physical therapy interventions include passive movements of the extremities for deeply sedated patients, in-bed and out-of-bed mobility, active or passive cycling ,neuromuscular electrical stimulation and ambulation.

Chest physiotherapy facilitates removal of retained or profuse airway secretions aiming to reduce airway resistance, optimize lung compliance, and decrease the work of breathing. Multimodality respiratory physiotherapy appeared to reduce mortality in ICU patients.

Pulmonary Function in Mechanically Ventilated Patients Salvador Benito, Alvar Net, 2012-12-06

This welcome addition to the series Update in Intensive Care and Emergency Medicine emerges from the most recent of a series of meetings organized by Alvar Net and Salvador Benito of Barcelona

This gathering provided a forum for European intensive care specialists to exchange ideas knowledge and experience on the measurements feasible in mechanically ventilated patients

The scope was ambitious ranging from basics like the measurement of airway pressure and blood gases to topics such as CT MRI and the multiple inert gas elimination technique

The success of the meeting made publication a logical consequence

The book is unique in its breadth

The contributors from numerous centers in Europe and North America cover all techniques employed in intensive care units describing indications contraindications procedures biases and complications

This volume will be an invaluable source for intensive care specialists and other clinicians

Alongside practical descriptions of procedures they employ routinely spirometry measurement of systemic vascular oxygen pressure Swan Ganz catheterization BOPA etc they will find accounts of such sophisticated techniques as on line measurement of functional residual capacity isotope determination of ventilation perfusion ratios diaphragmatic metabolism and peripheral oxygen exchange

I am especially happy to see the book published by Springer Verlag which has distinguished itself in the field of intensive care medicine
