Model-Driven Online Capacity Management for Component-Based Software Systems André van Hoorn, 2014-10-15

Capacity management is a core activity when designing and operating distributed software systems. Particularly enterprise application systems are exposed to highly varying workloads. Employing static capacity management this leads to unnecessarily high total cost of ownership due to poor resource usage efficiency. This thesis introduces a model driven online capacity management approach for distributed component based software systems called SLastic. The core contributions of this approach are a modeling language to capture relevant architectural information about a controlled software system, an architecture based online capacity management framework based on the common MAPE-K control loop architecture, and model driven techniques supporting the automation of the architectural runtime reconfiguration operations for controlling a system's capacity as well as an integration of the Palladio Component Model. A qualitative and quantitative evaluation of the approach is performed by case studies, lab experiments, and simulation.

Software Engineering: Effective Teaching and Learning Approaches and Practices Ellis, Heidi J.C., Demurjian, Steven A., Naveda, J. Fernando, 2008-10-31. Over the past decade software engineering has developed into a highly respected field. Though computing and software engineering education continues to emerge as a prominent interest area of study, few books specifically focus on software engineering education itself. *Software Engineering: Effective Teaching and Learning Approaches and Practices* presents the latest developments in software engineering education, drawing contributions from over 20 software engineering educators from around the globe. Encompassing areas such as student assessment and learning, innovative teaching methods, and educational technology, this much needed book greatly enhances libraries with its unique research content.

Digital Transformation Reimund Neugebauer, 2019-05-14. With the exception of written letters and personal conversations, digital technology forms the basis of nearly every means of communication and information that we use today. It is also used to control the essential elements of economic, scientific, and public and private life: security, production, mobility, media, and healthcare. Without exaggerating, it is possible to say that digital technology has become one of the foundations of our technologically oriented civilization. The benefits of modern data technology are so impressive and the potential for future applications so enormous that we cannot fail to promote its development if we are to retain our leading role in the competitive international marketplace. In this process, security plays a vital role in each of the areas of application of digital technology: the more technological sectors are entrusted to data systems technology, the more important their reliability becomes to us. Developing digital systems further while simultaneously ensuring that they always act and respond in the best interests of people is a central goal of the technological research and development propagated and conducted by Fraunhofer.

Integration in Enterprise Portal Systems Oliver Gmelch, 2012 The ever growing number of application scenarios for IT systems leads to a significant increase in their number and hence to a level of complexity that has grown tremendously in comparison with early IT installations by the mid of the past decade In numerous attempts to integrate these diverging application stacks various prominent methods have emerged in the past most recently the topic of EAI which strives to achieve a consolidated view at diverse application systems However the emergence and rise of cloud based services leads to new challenges to deal with Usage of offerings from a no further specified cloud appears appealing for IT decision makers since it promises cost savings while even enhancing flexibility to quickly respond to changing market needs To further support this idea this work focuses on the aspect of inter organisational networks that are characterised by short setup times and short time to market in order to achieve innovative products emerging from the cooperation between different actors In this context proper backing by dedicated ICT components is one of the key challenges This book therefore demonstrates how portal systems acting as intermediary between providers and consumers can be embedded into networked enterprises by providing seamless access to all relevant information To achieve this this book presents a generic architecture that can serve as a blueprint for future implementations for the type of enterprise portals introduced previously and focuses on integration of external services in a user centric manner concentrating on the user and his specific needs to achieve productivity and user satisfaction gains Moreover secure communication facilities allow to consider the current application and or user context to control exchange of information between different applications integrated on the portal platform

Kernkonzept und Veranschaulichung Steffen Friesen, 2021-09-29 Essay aus dem Jahr 2020 im Fachbereich Informatik Software Note 2,0 FOM Hochschule für Oekonomie Management gemeinnützige GmbH Köln Sprache Deutsch Abstract In dieser Arbeit werden Anforderungen mittels eines Use Case Diagramms dargestellt und anschließend formell beschrieben Anschließend erfolgt die Modellierung des beispielhaften Use Cases als Klassen und Aktivitätsdiagramm Außerdem wird ein erster Entwurf der Architektur des zu entwickelnden Software Systems dargestellt Zum Abschluss dieser Arbeit geht ein Fazit und ein Ausblick auf das was folgen kann Viele Unternehmen entdecken zurzeit die Agile Entwicklung für sich In dieser ist es blick die in dieser Arbeit dargestellten Vorgehensweise nicht zu berücksichtigen In

der agilen Entwicklung wird auf schnelle inkrementelle Auslieferung von kleinen Softwarepaketen Wert gelegt. Das heißt, dass große Analysen und Anforderungserhebungen nicht im Vorfeld stattfinden. Dabei können Anforderungen, die im ersten Augenblick nicht offensichtlich sind, vergessen werden. In großen Projekten wird dieses Vorgehen wohl kaum umzusetzen sein. Damit Fehler vermieden werden, sollte an der strukturierten Analyse festgehalten werden.

Integrative Production Technology for High-Wage Countries Christian Brecher, 2011-12-17. Industrial production in high wage countries like Germany is still at risk. Yet there are many counter examples in which producing companies dominate their competitors by not only compensating for their specific disadvantages in terms of factor costs (e.g. wages, energy, duties and taxes) but rather by minimising waste, using synchronising integrativity as well as by obtaining superior adaptivity on alternating conditions. In order to respond to the issue of economic sustainability of industrial production in high wage countries, the leading production engineering and material research scientists of RWTH Aachen University together with renowned companies have established the Cluster of Excellence Integrative Production Technology for High Wage Countries. This compendium comprises the cluster's scientific results as well as a selection of business and technology cases in which these results have been successfully implemented into industrial practice in close

cooperation with more than 30 companies of the industrial production sector
