

A microscopic view of several developing embryos, likely in a culture dish. The embryos are surrounded by a greenish-yellow fluid, possibly a nutrient medium. The embryos themselves are small, round, and have a brownish-orange center, possibly indicating the nucleus or a developing eye. The background is dark, making the embryos and the fluid stand out.

Textbook Outlines to Accompany Developmental Biology, Scott F. Gilbert, 9th Edition, 2012 God's Providence and Randomness in Nature Robert John Russell, Joshua M. Moritz, 2019-02-11 In October 2014 a group of mathematicians physicists ecologists philosophers and theologians gathered at a special conference in Berkeley California to present the results of a two year research program dubbed Project SATURN This program explored many rich avenues of thought at the intersection of modern science and Christian theology Chief among them is the possibility that specific processes might be so complex that they do not have sufficient physical causes Known as ontological indeterminism this idea has profound implications for theology Specifically it allows God to be thought of as acting providentially within nature without violating the laws and processes of nature Such a momentous insight could influence how we understand free will natural evil suffering in nature and the relation between divine providence and human evolution The essays collected here discussed these topics and were initially presented at the 2014 conference Part I establishes the scientific basis for conceptualizing specific processes in the universe as inherently random and possibly indeterministic Part II discusses the philosophical and theological issues that spring from this understanding Together they represent the cutting edge of thought in the increasingly productive dialogue between science and theology Short for the Scientific and Theological Understandings of Randomness in Nature Project SATURN was created by the Center for Theology and the Natural Sciences a Program of the Graduate Theological Union Berkeley It was funded with a grant administered by Calvin College and provided by the John Templeton Foundation *Towards a Theory of Development* Alessandro Minelli, Thomas Pradeu, 2014 Is it possible to explain and predict the development of living things What is development Articulate answers to these seemingly innocuous questions are far from straightforward To date no systematic targeted effort has been made to construct a unifying theory of development This novel work offers a unique exploration of the foundations of ontogeny by asking how the development of living things should be understood It explores the key concepts of developmental biology asks whether general principles of development can be discovered and examines the role of models and theories The two editors one a biologist with long interest in the theoretical aspects of his discipline the other a philosopher of science who has mainly worked on biological systems have assembled a team of leading contributors who are representative of the scientific and philosophical community within which a diversity of thoughts are growing and out of which a theory of development may eventually emerge They
