Differential Equations: A Dynamical Systems Approach John H. Hubbard, Beverly H. West, 2012-12-06 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the classical techniques of applied mathematics This renewal of interest both in research and teaching had led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and

reinforce the traditional methods of applied mathematics. Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses. TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathematical Sciences AMS series which will focus on advanced textbooks and research level monographs.

**Preface** As in Part I this book concentrates on understanding the behavior of differential equations rather than on solving the equations. Part I focused on differential equations in one dimension; this volume attempts to understand differential equations in  $n$  dimensions. The existence and uniqueness theory carries over with almost no changes.

**Morse Theoretic Methods in Nonlinear Analysis and in Symplectic Topology** Paul Biran, Octav Cornea, François Lalonde, 2006-02-12. The papers collected in this volume are contributions to the 43rd session of the Séminaire de mathématiques supérieures SMS on Morse Theoretic Methods in Nonlinear Analysis and Symplectic Topology. This session took place at the Université de Montréal in July 2004 and was a NATO Advanced Study Institute ASI. The aim of the ASI was to bring together young researchers from various parts of the world and to present to them some of the most significant recent advances in these areas. More than 77 mathematicians from 17 countries followed the 12 series of lectures and participated in the lively exchange of ideas. The lectures covered an ample spectrum of subjects which are reflected in the present volume: Morse theory and related techniques in infinite dimensional spaces; Floer theory and its recent extensions and generalizations; Morse and Floer theory in relation to string topology; generating functions; structure of the group of Hamiltonian diffeomorphisms and related dynamical problems; applications to robotics and many others. We thank all our main speakers for their stimulating lectures and all participants for creating a friendly atmosphere during the meeting. We also thank Ms Diane Belanger, our administrative assistant, for her help with the organization and Mr André Montpetit, our technical editor, for his help in the preparation of the volume.

**Mathematical Time Capsules** Dick Jardine, Amy Shell-Gellasch, 2011. Mathematical Time Capsules offers teachers historical modules for immediate use in the mathematics classroom. Readers will find articles and activities from mathematics history that enhance the learning of topics covered in the undergraduate or secondary mathematics curricula. Each capsule presents at least one topic or a historical thread that can be used throughout a course. The capsules were written by experienced practitioners to provide teachers with historical background and classroom activities designed for immediate use in the classroom along with further references and resources on the chapter subject.
