Digital Remote Sensing:

Remote Sensing Digital Image Analysis John A. Richards, 2012-12-06 Possibly the greatest change confronting the practitioner and student of remote sensing in the period since the first edition of this text appeared in 1986 has been the enormous improvement in accessibility to image processing technology. Falling hardware and software costs combined with an increase in functionality through the development of extremely versatile user interfaces has meant that even the user unskilled in computing now has immediate and ready access to powerful and flexible means for digital image analysis and enhancement. An understanding at algorithmic level of the various methods for image processing has become therefore even more important in the past few years to ensure the full capability of digital image processing is utilised. This period has also been a busy one in relation to digital data supply. Several nations have become satellite data gatherers and providers using both optical and microwave technology. Practitioners and researchers are now faced therefore with the need to be able to process imagery from several sensors together with other forms of spatial data. This has been driven to an extent by developments in Geographic Information Systems (GIS) which in turn have led to the appearance of newer image processing procedures as adjuncts to more traditional approaches.

Introductory Digital Image Processing John R. Jensen, 2015-04-17 For junior graduate level courses in Remote Sensing in Geography, Geology, Forestry and Biology. *Introductory Digital Image Processing: A Remote Sensing Perspective* focuses on digital image processing of aircraft and satellite derived remotely sensed data for Earth resource management applications. Extensively illustrated, it explains how to extract biophysical information from remote sensor data for almost all multidisciplinary land based environmental projects. Part of the Pearson Series Geographic Information Science. Now in full color, the Fourth Edition provides up to date information on analytical methods used to analyze digital remote sensing data. Each chapter contains a substantive reference list that can be used by students and scientists as a starting place for their digital image processing project or research. A new appendix provides sources of imagery and other geospatial information.

Digital Remote Sensing Prithvish Nag, M. Kudrat, 1998 [Remote Sensing Digital Image Analysis](#) John Alan Richards, Xiuping Jia, 1999 *Remote Sensing Digital Image Analysis* provides the non specialist with an introduction to quantitative evaluation of satellite and aircraft derived remotely retrieved data. Each chapter covers the pros and cons of digital remotely sensed data without detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations. Problems conclude each chapter. This fourth edition has been developed to reflect the changes that have occurred in this area over the past several years. Its focus is on those procedures that seem now to have become part of the set of tools regularly used to perform thematic mapping. As with previous revisions the fundamental material has been preserved in its original form because of its tutorial value; its style has been revised in places and it has been supplemented if newer aspects have emerged in the time since the third edition appeared. It still meets however the needs of the senior student and practitioner.

Digital Analysis of Remotely Sensed Imagery Jay Gao, 2009-05-01 An important text that identifies and introduces new trends in image analysis Digital Analysis of Remotely Sensed Imagery provides thorough coverage of the entire process of analyzing remotely sensed data for the purpose of producing accurate representations in thematic map format Written in easy to follow language with minimal technical jargon the book explores cutting edge techniques and trends in image analysis as well as the relationship between image processing and other recently emerged special technologies

Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter

Remote Sensing Pathways Thomas L. Millette, 1989 **Digital Image Processing in Remote Sensing** Jan-Peter Muller, 1988 **Digital Methods and Remote Sensing in Archaeology** Maurizio Forte, Stefano Campana, 2017-02-10 This volume debuts the new scope of Remote Sensing which was first defined as the analysis of data collected by sensors that were not in physical contact with the objects under investigation using cameras scanners and radar systems operating from spaceborne or airborne platforms A wider characterization is now possible Remote Sensing can be any non destructive approach to viewing the buried and nominally invisible evidence of past activity Spaceborne and airborne sensors now supplemented by laser scanning are united using ground based geophysical instruments and undersea remote sensing as well as other non invasive techniques such as surface collection or field walking survey Now any method that enables observation of evidence on or beneath the surface of the earth without impact on the surviving stratigraphy is legitimately within the realm of Remote Sensing The new interfaces and senses engaged in Remote Sensing appear throughout the book On a philosophical level this is about the landscapes and built environments that reveal history through place and time It is about new perspectives the views of history possible with Remote Sensing and fostered in part by immersive interactive 3D and 4D environments discussed in this volume These perspectives are both the result and the implementation of technological cultural and epistemological advances in record keeping interpretation and conceptualization Methodology presented here builds on the current ease and speed in collecting data sets on the scale of the object site locality and landscape As this volume shows many disciplines surrounding archaeology and related cultural studies are currently involved in Remote Sensing and its relevance will only increase as the methodology expands **Digital Airborne Camera** Rainer Sandau, 2009-12-10 Digital airborne cameras are now penetrating the fields of photogrammetry and remote sensing Due to the last decade s results in research and development in the fields of for instance detector technology computing power memory capacity position and orientation measurement it is now possible to generate with this new generation of airborne cameras different sets of geometric and spectral data with high geometric and radiometric resolutions within a single flight This is a decisive advantage as compared to film based airborne cameras The linear characteristic of the opto electronic converters is the basis for the transition from an imaging camera to an images generating measuring instrument Because of

the direct digital processing chain from the airborne camera to the data products there is no need for the processes of chemical film development and digitising the film information Failure sources as well as investments and staff costs are avoided But the effective use of this new technology requires the knowledge of the features of the image and information generation its possibilities and its restrictions This book describes all components of a digital airborne camera from the object to be imaged to the mass memory device So the image quality influencing processes in nature are described as for instance the reflection of the electromagnetic sun spectrum at the objects to be imaged and the influence of the atmosphere Also the essential features of the new digital sensor system their characteristics and parameters are addressed and put into the system context The complexity of the cooperation of all camera components as for instance optics filters detector elements analogue and digital electronics software and so forth becomes transparent The book includes also the description of example systems

Remote Sensing Time Series Claudia Kuenzer, Stefan Dech, Wolfgang Wagner, 2015-04-28 This volume comprises an outstanding variety of chapters on Earth Observation based time series analyses undertaken to reveal past and current land surface dynamics for large areas What exactly are time series of Earth Observation data Which sensors are available to generate real time series How can they be processed to reveal their valuable hidden information Which challenges are encountered on the way and which pre processing is needed And last but not least which processes can be observed How are large regions of our planet changing over time and which dynamics and trends are visible These and many other questions are answered within this book Remote Sensing Time Series Analyses Revealing Land Surface Dynamics Internationally renowned experts from Europe the USA and China present their exciting findings based on the exploitation of satellite data archives from well known sensors such as AVHRR MODIS Landsat ENVISAT ERS and METOP amongst others Selected review and methods chapters provide a good overview over time series processing and the recent advances in the optical and radar domain A fine selection of application chapters addresses multi class land cover and land use change at national to continental scale the derivation of patterns of vegetation phenology biomass assessments investigations on snow cover duration and recent dynamics as well as urban sprawl observed over time
