Pressure-Actuated Cellular Structures for Adaptive Wingtips Patrick Meyer, 2025-08-01 Aviation has a substantial environmental impact necessitating a shift towards more sustainability High aspect ratio HAR wings increase the efficiency of future transport aircraft by significantly reducing induced drag and consequently fuel consumption However the extended wingspan of HAR wings is accompanied by challenges including ground operations structural loads and aircraft control Folding wingtips FWTs address these challenges by incorporating a hinge at the outboard wing section enabling the wingtip to fold during ground operations or specific flight scenarios Wingtip actuators that allow active adjustment of the wingtip s cant angle and hinge stiffness can expand the potential operating modes of FWTs beyond the current state of the art Possible operating modes include extended load alleviation mission adaptability advanced flight control and active flutter suppression While most research on FWTs focuses on flight dynamics and aeroelasticity little attention has been given to the structural design of wingtip actuators This book introduces an actuator concept that transforms FWTs into multifunctional wingtip devices referred to as actuated adaptive wingtips The concept of actuated adaptive wingtips is based on a compliant morphing structure that adapts its mechanical properties by varying the fluid pressure in structure integrated chambers

Lectures Notes on Advanced Structured Materials Holm Altenbach, Michael Johlitz, Markus Merkel, Andreas Öchsner, 2022-12-02 The book on advanced structured materials is designed to facilitate teaching and informal discussion in a supportive and friendly environment The book provides a forum for postgraduate students to present their research results and train their presentation and discussion skills Furthermore it allows for extensive discussion of current research being conducted in the wider area of advanced structured materials Doing so it builds a wider postgraduate community and offers networking opportunities for early career researchers In addition to focused lectures the book provides specialized teaching overview lectures from experienced senior academics The 2022 Postgraduate Seminar entitled Advanced Structured Materials Development Manufacturing Characterization Applications was held from February 28th till March 4th 2022 in Malta The book that presented postgraduate lectures had a strong focus on polymer mechanics composite materials and additive manufacturing

Verarbeitung und Charakterisierung von Polyamid 6-Polyhydroxybutyrat-Blends Dill, Svenja, 2020-06-04 Aufgrund der deutlich unterschiedlichen Verarbeitungsbereiche von Polyhydroxybutyrat PHB und Polyamid 6 PA 6 ist die gemeinsame Verarbeitung der beiden Polymere eine verfahrenstechnische Herausforderung Um die Verträglichkeit und Prozessfähigkeit der PA 6 PHB Blends beurteilen zu können wurde somit zunächst ein geeigneter Aufbereitungsprozess auf einem Doppelschneckenextruder entwickelt Zudem erfolgte die Herstellung von maleierten PHB C als Verträglichkeitsvermittler An zwei und dreikomponentigen Blends konnte gezeigt werden dass die Herstellung der Blends möglich ist diese jedoch zu ausgeprägter Koaleszenz neigen Die C Typen bewirken zwar teilweise eine Verfeinerung der Morphologie vermeiden die Koaleszenz jedoch nicht effektiv Durch rasterkraftmikroskopische Aufnahmen und mechanische

Untersuchungen kann allerdings eine begrenzte Kompatibilisierungswirkung nachgewiesen werden. Zudem wird deutlich, dass ein synergistischer Versteifungseffekt zu erhöhten Zugmodulen der Blends führt. Hierdurch werden im spritzgetrockneten Zustand bis zu 131% des reinen PA 6 Wertes und nach der Konditionierung 151% erreicht. Mittels dynamischer Differenzkalorimetrie und Fourier Transformations Infrarotspektroskopie konnte der Effekt auf die Erhöhung der Kristallinität zurückgeführt werden. Due to the significantly different processing ranges of polyhydroxybutyrate (PHB) and polyamide 6 (PA 6) the combined processing of the two polymers is a process engineering challenge. In order to assess the compatibility and processability of the PA 6 / PHB blends a suitable compounding process was therefore first developed on a twin screw extruder. In addition the production of maleated PHB (C) as a compatibilizer was carried out. It could be shown on two and three component blends that it is possible to produce the blends but that they tend to have a pronounced coalescence. Although the C types partially refine the morphology they do not effectively prevent coalescence. However a limited compatibility effect can be demonstrated by atomic force microscopic images and mechanical examinations. Furthermore a synergistic stiffening effect leads to increased tensile moduli of the blends. This results in up to 131% of the pure PA 6 value in the dry as mould state and 151% after conditioning. Using dynamic differential calorimetry and Fourier transform infrared spectroscopy the effect could be attributed to the increase in crystallinity.

Deformation and Fracture Behaviour of Polymer Materials Wolfgang Grellmann, Beate Langer, 2017-07-12. This book covers the most recent advances in the deformation and fracture behaviour of polymer material. It provides deeper insight into related morphology property correlations of thermoplastics, elastomers and polymer resins. Each chapter of this book gives a comprehensive review of state of the art methods of materials testing and diagnostics tailored for plastic pipes, films and adhesive systems as well as elastomeric components and others. The investigation of deformation and fracture behaviour using the experimental methods of fracture mechanics has been the subject of intense research during the last decade. In a systematic manner modern aspects of fracture mechanics in the industrial application of polymers for bridging basic research and industrial development are illustrated by multifarious examples of innovative materials usage. This book will be of value to scientists, engineers and in polymer materials science.
